4. Equipment under test description.

*The customer provided description.

4.1 General description

BreezeMAX Extreme 5x is a high capacity, IP services oriented Broadband Wireless Access system. BreezeMAX Extreme 5x is digital modulated TDD system operating in the 4900MHz up to 5950MHz band. The system contains a Base station unit and a Subscriber unit.

Subscriber unit configuration:

The basic system configuration is a two-box configuration that contains

Indoor unit that contains a power supply and an Ethernet 10/100BaseT (RJ 45) interface.

Outdoor unit containing the entire radio and digital section . Radio Input/Output is connected to two N type connectors , TX/RX and RX allowing connection to dual port antenna .

A single CAT5 cable connecting the indoor and outdoor unit serves for carrying the data as well as for transferring power, management and control signals.

The subscriber indoor unit is a single power supply (55VDC) and Ethernet 10/100BaseT (RJ 45) interface.

5. Environmental evaluation and exposure limit according to FCC part 1, §1.1307, §1.1310

Limit for power density for general population/uncontrolled exposure is 1(mW/cm²) or 10 (W/m²).

The power density calculation is $S = (Pt / 4\pi r^2)$.

Where:

Pt - The transmitted power (EIRP) (mW)

r - The distance from the unit. (cm)

The limit 1(mW/cm²) can be calculated from the above based on the following data:

Pt- the transmitted power which is equal to the peak output power 23.5 dBm plus external antenna gain 17 dBi. The maximum peak EIRP = 40.5 dBm = 11220 mW

Maximum allowed distance “r”, where RF exposure limits may not be exceeded,

$r = \text{SQRT} (11220/4\pi)$ and is more than 30 cm from the antenna main lobe.

TEST PROCEDURE

The test was performed for two emission bandwidths. The measurements were performed at three transmitted carrier (channel) frequencies at bottom, middle and top of the 4940 - 4990 MHz frequency band under maximum data transfer bit rate. To find maximum radiation the turntable was rotated 360°, measuring antenna height was changed from 1 to 4 m, and the antenna polarization was changed from vertical to horizontal. The measurements were performed according to FCC part 90.210 m (7) with RBW = at least 1% of EBW and VBW = 30 kHz. The result was previously verified according to ANSI/TIA-603-C-2004 section 2.2.12 substitution test method. Investigation of transmitter spurious emissions was performed. EUT was replaced by generator and substitution antenna. The level calculated from generator output level, substitution antenna gain and connected cable loss was compared with the limit.

TEST SUMMARY

EUT comply with FCC part 90.210 (m) requirements.

7.1.6 Ratio of the peak excursion per part 90.1215(e)

Method of measurement DA 02-2138
Operating Frequency Range 4942.5 – 4987.5 MHz
Ambient Temperature 22° C Relative Humidity 50% Air Pressure 1010 hPa

The measurements were performed for all emission bandwidth options at maximum allowed output power under maximum data transfer bit rate. The trace #1 was performed with RBW= 1 MHz and VBW = 3 MHz. The trace #2 was performed with RBW= 1 MHz and VBW = 1 kHz. $VBW \geq 1/T = 1/1.64 \text{ ms} = 0.6 \text{ kHz}$ where T is transmission pulse duration from plot # 103.

4945	12.3	13.0	100
4962.5	11.2	13.0	101
4985	12.4	13.0	102

REQUIREMENT

The ratio of the peak excursion of the modulation envelope to the peak transmit power shall not exceed 13 dB across any 1 MHz bandwidth or the emission bandwidth whichever is less as required in section 90.1215(e).

TEST SUMMARY

Transmitter meets standard requirement.

TEST PROCEDURE

The EUT was placed in a climatic chamber and allowed to stabilize at 20°C temperature and nominal voltage for at least 15 min. The reference carrier frequency result was taken. The input voltage was changed from 85% of nominal to 115%. Frequency changes were noted. The temperature in climatic chamber was varied from -30°C to +50°C. Measured frequencies were noted in the table above.

LIMIT

The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized frequency band of operation.

TEST SUMMARY

Transmitter carrier frequency stays within the authorized frequency band 4940 – 4990 MHz.
