<b>The date of test:</b>	09/04/2002.

**Description of Equipment****Under Test (EUT):** BreezeAccess 5.7GHz GFSK frequency hopping spread spectrum (FHSS) system of the BreezeAccess V family**Manufactured by:** Alvarion (formerly Breezecom & Floware) Ltd.**Reference Documents:**

- ❖ CFR 47 FCC: "Rules and Regulations";  
Part 15. "Radio frequency devices";  
Subpart C: "Intentional radiators"

**Test Results:** The EUT was found to be in compliance with the requirements of FCC Rules Part 15 Subpart C Sec.15.205, 15.207, 15.209, 15.247 (c).

This Test Report contains 73 pages and may be used only in full.	This Test Report applies only to the specimen tested and may not be applied to other specimens of the same product.

## 1 General

### 1.1 BreezeACCESS 5.7GHz GFSK system description:

**Description of Equipment Under Test (EUT):** BreezeAccess 5.7GHz GFSK frequency hopping spread spectrum (FHSS) system

**Manufactured by:** Alvarion (formerly Breezecom & Floware) Ltd.

The BreezeAccess 5.7GHz (BreezeAccess V) GFSK frequency hopping spread spectrum (FHSS) system is a modification of the BreeAccess 2.4GHz GFSK (FCC ID: LKT-IF-24) frequency hopping spread spectrum (FHSS) transceiver used for WLANs and similar applications. This system is designed to support the 5725-5850MHz band and is a two box system containing an outdoor unit and an indoor unit. The indoor unit is the same unit for all BreezeAccess products. In order to change the system frequency band some modifications are done in the radio section of the outdoor unit.

The modification is the high frequency radio part changed to support the 5.7GHz band instead of the 2.4GHz band. The changes include the LNA, front-end filter and mixer in the receive part of the system. Mixer, pre-amplifier, power amplifier and filters in the transmit part of the system. The TX/RX switch was changed to a switch that can support the band. The PLL was upgraded by adding a frequency doubler to support the 5.7GHz band the PLL component was not changed. All other parts of the system: modem, CPU, IF section, power supply, internal clocks and control were not changed and are similar to the 2.4GHz system.

The 5.7GHz band operates in the same frequency regime as the 2.4GHz system. There was no change in the modem software or hardware. The RF PLL setting to 5.7GHz band instead of the 2.4GHz band does the frequency shift.

The modulation is done in the indoor unit that is common to all BreezeAccess products and therefore all modulation characteristics are kept and are identical to the 2.4GHz band.

The tests done on the 5.7GHz system cover all the radio changes and include antenna port test, harmonic radiation test, restricted band test and output power test.

All other characteristic and description are identical to the LKT-IF-24 and can be taken from there.

The block diagram of IF 5.7 GHz outdoor unit RF section is shown in Figure 1. Items marked in red are replaced from the original 2.4 GHz system for the 5.7GHz system.

The block diagram of IF 5.7 GHz indoor unit is shown in Figure 2.

The EUT was tested with two antennas:

1. Sector antenna:  
Manufacture: European antenna  
Model No: SA17-55V/450  
Gain: 17dBi
2. Integrated antenna:  
Manufacture: MARS antenna & RF systems  
Model: ANT.MA575820V  
Gain: 20 dBi

The EUTs internal view is shown in Figure 3.

Title: Test on BreezeAccess 5.7GHz GFSK frequency hopping spread spectrum (FHSS) system

## 1.2 Scope:

This test report contains results of the tests, performed on BreezeAccess 5.7GHz GFSK frequency hopping spread spectrum (FHSS) system according to the following requirements of CFR 47 FCC Part 15 Subpart C:

1. Conducted emission measurements per Sec. 15.207;
2. Spurious emission measurements up to 7<sup>th</sup> harmonic for low, middle and high channels per C Sec.15.209;
3. Radiated emission measurements in two restricted bands 5.35-5.46 GHz and 10.6-12.7 GHz per Sec.15.205, 15.35.
4. Spurious emission. Antenna conducted per Sec.15.247 (c).

Only the tests related to performed changes were made.

Test Report No.: 8212308340 Rev.1

## 2 Test specification, Methods and Procedures

### Test Specification:

- ❖ CFR 47 FCC: "Rules and Regulations";  
Part 15. "Radio frequency devices";  
Subpart C: "Intentional radiators".

### Methods and Procedures:

- ❖ ANSI C63/4/1992: "American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the range of 9 kHz to 40 GHz".

## 3 Measurements, examinations and derived results

### 3.1 *Location of the Test Site:*

EMC laboratory of the Standards Institution of Israel in Tel-Aviv.

### 3.2 *Test condition:*

Temperature: 22 °C  
Humidity: 60 %

### 3.3 Conducted emission test:

#### 3.3.1 Requirements:

EUTs conducted emission within the band 450 kHz to 30 MHz shall not exceed value required in section 15.207.

#### 3.3.2 Test configuration:

The measurements were performed on the 110 VAC mains input of the EUT power adapter. The EUT was placed on a non-metallic table in a shielded chamber at a height of 80 cm from the floor of the shielded chamber and 40 cm from the wall of the shielded chamber.

#### 3.3.3 Test procedure:

The EUT was operated to transmitting through the customer software. First, initial scans were performed. Final measurements were performed at the frequencies where emission exceeded the tolerance limit.

Test equipment (EMI receiver) setup was as follow:

##### Initial scan:

Detector type	Peak
Mode	Max hold
Bandwidth	9 kHz
Step size	Continuous sweep
Sweep time	>100 msec

##### Measurements

Detector type	Quasi-peak, Avg (CISPR)
Bandwidth	9 kHz
Measurement time	200 seconds/MHz
Observation	>15 seconds

#### 3.3.4 Test results:

The conducted emissions from the EUT were found below specified limit. Test results are shown in Table 1 and Plots #1 - #4.

**Table 1. Conducted emission test results on 110 VAC input of the EUT power adapter**

### 3.4 Radiated emission test:

#### 3.4.1 Requirements:

EUTs radiated emission shall not exceed value required in section 15.209.

#### 3.4.2 Test procedure:

The EUT was tested with two different antennas - sector and integrated.

The measurements were performed in the anechoic chamber.

The EUT was arranged on a non-metallic table 0.8 m placed on the turntable.

Measuring antennas used: Up to 22 GHz - Double Ridge **EMCO** model 3115  
above 22 GHz - Alpha TRG model A361

Antenna height = 1 m.

Polarization: Vertical/Horizontal

Measurement distance = 1m.

The frequency range was investigated up to 40516 MHz.

The measurements were performed in vertical and horizontal polarization, the maximum reading recorded.

Measuring detector function and bandwidths:

Detector type	Peak
Resolution bandwidth	1MHz
Video bandwidth	1 MHz

Detector type	Average
Resolution bandwidth	1MHz
Video bandwidth	3 kHz*

#### 3.4.3 Radiated emission test results and calculation ratio:

The test results with sector antenna are shown in table #1 to #3.

The test results with integrated antenna are shown in table #4 to #6.

##### Note 1:

Up to 22000 MHz the emission level was calculated as:

E Reading (dB $\mu$ V) + measuring cable loss (dB) + measuring antenna factor (dB/m) + Distance correction factor

For measuring cable loss and measuring antenna factor refer to Appendix 2.

Distance correction factor = -9.5 dB (correction to extrapolation reading from 1 m to 3m specified distance)

Above 22000 MHz the emission level was calculated as

E Reading (dB $\mu$ V) + measuring antenna factor (dB/m) + Distance correction factor. The measuring antenna was directly connected to the spectrum analyzer.

### 3.5 Restricted bands:

#### 3.5.1 Requirements:

Radiated emission in restricted bands should meet the requirements of section 15.205.

#### 3.5.2 Test procedure:

The EUT was tested with two different antennas - sector and integrated.

The measurements were performed in the anechoic chamber.

The EUT was arranged on a non-metallic table 0.8 m placed on the turntable.

Measuring antennas used: Double Ridge **EMCO** model 3115

Antenna height = 1 m.

Measurement distance = 1m.

Measuring detector function and bandwidths:

Detector type	Peak
Resolution bandwidth	1MHz
Video bandwidth	1 MHz

Detector type	Average
Resolution bandwidth	1MHz
Video bandwidth	3 kHz*

#### 3.5.3 Test results and calculation ratio:

##### EUT with sector antenna

The spurious emissions were found in two restricted bands: 5.35-5.46 GHz and 10.6-12.7 GHz.

The test results are shown in Plots #5 to # 16.

##### EUT with integrated antenna

The spurious emissions were found in three restricted bands: 5.35-5.46 GHz, 10.6-12.7 GHz and 22.01 – 23.12 GHz.

The test results are shown in Plots #17 to #34.

##### **Note 2:**

The measurements in restricted bands were performed at 1 m distance instead of 3 m, thus the specified limit line in the plots 54 dB $\mu$ V/m (for Average detector) and 74 dB $\mu$ V/m (for Peak detector) was raised to 10 dB.

Title: Test on BreezeAccess 5.7GHz GFSK frequency hopping spread spectrum (FHSS) system

### **3.6 Spurious Emission, Antenna conducted:**

#### **3.6.1 Requirements:**

RF conducted spurious emissions shall not exceed value required in sections 15.247 (c).

#### **3.6.2 Test procedure:**

The EUTs antenna connector was connected to the spectrum analyzer input via 20 dB attenuator.

The measurements were performed from 30 MHz to 40 GHz for low, middle and high channels were the unit was set to packetized transmission.

#### **3.6.3 Test results:**

Test results are shown in Plots #35 to # 99.

Test Report No.: 8212308340 Rev.1

## 5 Appendix 1: Test equipment used

All measurements equipment is on SII calibration schedule with a recalibration interval not exceeding once a year.

Instrument	Manufacturer	Model	Serial No.	Last calibration date	Next calibration date
Spectrum analyzer 10 KHz-26.5 GHz	HP	E7405a	SII 4944	04/02	04/03
Spectrum analyzer 9 KHz-50 GHz	HP	8565E	3517A00347	07/01	07/02
Antenna Double Ridge 1-18 GHz	EMCO	3115	SII4873	03/02	03/03
Antenna Standard Gain Horn 26.5-40 GHz	WILTRON	Alpha TRG A361	861A/590	01/02	01/03
LISN 9 kHz – 30 MHz	FCC	LISN- 50/250-32-4- 16	SII 5023	05/02	05/03
Transient limiter 0.009-200 MHz	HP	11947A	31074A3105	05/02	05/03
Attenuator 20 dB	HP	8491B	3929M5039 4	05/02	05/03

## 6 Appendix 2: Antenna Factor and Cable Loss

### Cable Loss

Type: Sucoflex 104PE; Ser.No.21324/4PE; 4 m length

Point	Frequency (GHz)	Cable Loss (dB)
0	0.0-1.8	1.67
1	1.8 – 3.6	2.39
2	3.6 – 5.4	3.04
3	5.4-7.2	3.58
4	7.2-9.0	4.06
5	9.0-10.8	4.49
6	10.8-12.6	4.91
7	12.6-14.4	5.31
8	14.4-16.2	5.66
9	16.2-18.00	6.01

### Antenna Factor

Double Ridged Guide Antenna mfr EMCO model 3115

Point	Frequency (MHz)	Antenna Factor (dB/m)
1	2000	27.4
2	2500	28.9
3	3000	31.0
4	4000	33.1
5	4500	32.5
6	5000	32.4
7	6000	53.7
8	6500	35.6
9	7000	36.4
10	7500	36.9
11	8000	37.0
12	8500	38.0
13	9000	38.6
14	9500	38.4
15	10000	38.4
16	10500	38.4
17	11000	38.9
18	11500	39.6
19	12000	39.4
20	12500	39.2
21	13000	40.3
22	13500	41.0
23	14000	41.2
24	14500	41.3
25	15000	40.0
26	15500	38.0
27	16000	38.1
28	16500	40.3
29	17000	42.2
30	17500	44.6
31	18000	46.2
