Attention: Application Examiner

Applicant: Alvarion Ltd.  
Re: Part 15 Class 2 Permissive Change Certification Application: Model Differences

FCC ID: LKT-VL-53C

To whom it may concern,

Attached please find a description of model number varieties and numbering scheme for marketing purposes. Please note this list also applies to other products with different FCC IDs that are currently under review by TCBs.

If you have questions or need further information, please contact the undersigned.

Sincerely,

THOMAS N. COKENIAS  
EMC Consultant/Agent for Alvarion Ltd.

## **BreezeACCESS VL / BreezeNET B system 5.3GHz band – Access Points and subscribers/clients**

All Alvarion products are based on the core unit, which is the Outdoor Unit (ODU). The ODU is carrying all the necessary components to support the wireless application, except the Power supply adaptor to 110/220V AC and the Antenna

**Exception:** some ODU units do have Integral Antenna. This Integral Antenna model is a 20 or 21dBi Antenna and it is used only for the Point to Point applications or for the point to multipoint subscribers/clients

The other components used in defining the model names are:

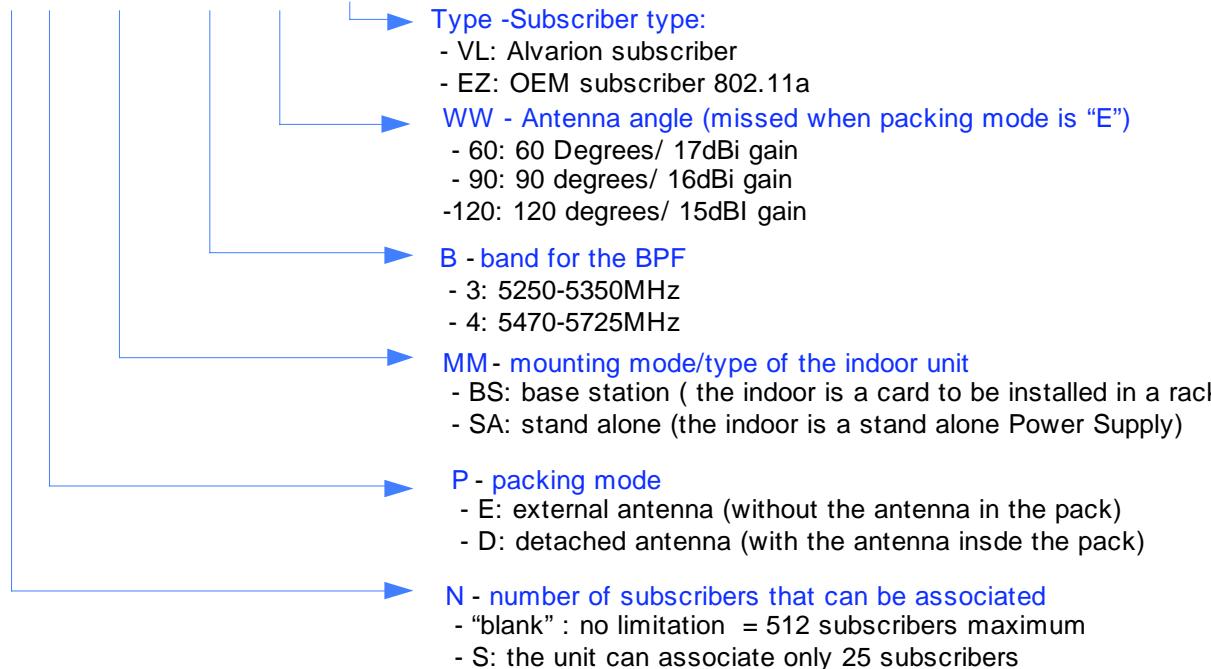

- 1) A SW component which limits the number of subscribers that can associate
  - a. Only one subscriber ( the unit will present itself as BreezeNET B)
  - b. 25 subscribers
  - c. 512- maximum
- 2) Antennas
  - a. Without antenna ( unit will not start to operate until the professional installer will introduce the antenna gain)
  - b. With antenna inside the package
- 3) Indoor Unit (IDU)
  - a. Stand Alone IDU
  - b. rack IDU for base stations' shelves
- 4) Type of BPF inside the ODU
  - a. 5.3 : 5250 – 5350 MHz
  - b. 5.4: 5470 – 5725 MHz
- 5) Antenna gain
  - a. 120 degrees antenna- 15dBi gain
  - b. 90 degrees antenna – 16dBi gain
  - c. 60 degrees antenna – 17dBi gain
- 6) A SW component which limits the type of the subscriber
  - a. Regular Alvarion subscribers (client station) - VL
  - b. OEM subscriber (client station) - EZ

All the above components are marketing decisions of promoting the BreezeAccess /BreezeNET B products with a very high flexibility in choosing the configuration

A short formula for understanding the model names will be:

- 1) for the BreezeAccess VL (point to multipoint applications)

## AUN-P-MM-5.B-WW-Type

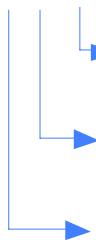

### 2) for the BreezeNET B (point to point application)

The general access point components all BreezeNet B products , if they are not “parameterized” in the Model Name, are:

- a. ODU (same like all other units + same SW code)
- b. Only one subscriber can associate  
(With this P2P product line The Access Point is called Base Unit or BU and the client/subscriber is called Remote Bridge or RB)  
By SW, when it is configured to work in P2P application, customer can switch between BU and RB mode of operation; only the BU has activated the DFS mechanism)
- c. Stand Alone IDU
- d. Antenna gain: 21dBi (integral 10.5 degrees antenna) if the package Letter is not mentioning a detached antenna, in which case the product will not work until the antenna gain will be set by the professional installer. Being a point to point application antenna gain lower than 21 is for low interest;
- e. Type of subscribers: is all the time only Alvarion product since user can switch between BU(Access Point) and RB(Client) mode of operation

The general formula for the Model Names of BreezeNet B (BNB) is:

## BU/RB-BrrP-B

- 
- B - band for the BPF**
    - 3: 5250-5350MHz
    - 4: 5470-5725MHz
  - P - packing mode**
    - blank: integral antenna
    - D: external antenna (without the antenna inside the pack)
  - rr - Information Rate Limitation**
    - 14: maximum 14 Mbps ( 7Mbps per direction)
    - 28: maximum 28 Mbps ( 20Mbps per direction)
    - 100: no limit - only HW limitations

The subscribers Models are based on the same structure as Access points. They will use integral or external antenna, stand alone or base station IDU and, similar to BreezeNet B applications, they will have internal SW limitations on the information rate that is allowed to pass.

For the next table the model names will be described in the column “Notes” with reference to the 5 components of the marketing models

No	Model	IC:	Notes
1	AU-E-SA-5.3-VL	2514A-VL53	Components: 0) ODU 1) 512 subscribers (AU-E-SA-5.3-VL) 2) No antenna delivered in the package (AU-E-SA-5.3-VL ) 3) Stand Alone Indoor Unit (AU-E-SA-5.3-VL) 4) 5.250 -5.350 BPF in the ODU (AU-E-SA-5.3-VL) 5) Antenna gain – N/A 6) Type of the subscribers = VL (AU-E-SA-5.3-VL)
