Field Calibration and Tune-Up Procedure  
FCC ID: LLB09010B4

Aclara technologies LLC's low power RF devices have passed through extensive testing and calibration Procedures while in the factory.

We test the LLB09010B4 units in production at the customer operating frequency of 467.3125MHz and measure the conducted power at 25.3 dBm with +/- 1 dB tolerance. The transmit power level is fixed and is set using a software setting in the Transceiver. The 09010B4 Transceiver module devices are shipped to the customer in the sealed enclosures. Therefore, no additional calibration, tuning is required in the field.

No adjustments can be made in the field, without breaking the factory sealed enclosure.

Sincerely,

Larry Murphy

Sr. Director, Customer Systems Engineering
