Field Calibration and Tune-Up Procedure
FCC ID: LLB10004S

Aclara's low power RF devices have passed through extensive testing and calibration procedures while in the factory. Therefore, no additional calibration, tuning, or adjustment is required in the field. Hexagram's low power RF devices are shipped to the customer in the sealed enclosures. Thus, no adjustments or tuning can be made in the field, without breaking the factory sealed enclosure.

Sincerely,

Larry Murphy
Executive Director of Engineering
