Field Calibration and Tune-Up Procedure  
FCC ID: LLB11006X

Aclara RF Systems, Formerly Hexagram's low power RF devices have passed through extensive testing and calibration Procedures while in the factory.

We test the LLB11006X units in production at the customer operating frequency of 467.3125MHz and measure the conducted power at 28 dBm with +/- 1.5 dB tolerance. The transmit power level is fixed and is set using a software setting in the Transceiver. The Hexagram's low power RF devices are shipped to the customer in the sealed enclosures. Therefore, no additional calibration, tuning is required in the field.

No adjustments can be made in the field, without breaking the factory sealed enclosure.

Sincerely,

A handwritten signature in blue ink, appearing to read 'L. Murphy', with a stylized flourish extending to the right.

Larry Murphy
