Field Calibration and Tune Up Procedure

FCC ID: LLB11583-2

Aclara low power RF devices have passed through extensive and multitask testing and calibration procedures while in the factory. Therefore, no additional calibration, tuning, or adjustment is required in the field.

**Aclara's low power RF devices are shipped to the customer in the sealed enclosures.** Thus, no adjustments or tuning can be made in the field, without breaking the factory sealed enclosure and MTU.

Sincerely,

Lazar Feldman  
Principal Engineer  
RF & Microwave Technology
