Field Calibration and Tune Up Procedure

FCC ID: **LLB11583**

Hexagram's low power RF devices have passed through extensive and multitask testing and calibration procedures while in the factory. Therefore, no additional calibration, tuning, or adjustment is required in the field.

Hexagram's low power **RF devices are shipped** to the customer **in the sealed enclosures**. Thus, no adjustments or tuning can be made in the field, without breaking the factory sealed enclosure.

Sincerely,

Lazar Feldman
Principal Engineer
RF and microwave systems
