2.0 TEST SUMMARY AND RESULTS

The EUT (Equipment Under Test) is a Water Meter Transmission Unit (MTU), Model 2019-006, manufactured by Aclara Technologies, LLC. The detailed test results are presented in a separate section. The following is a summary of the test results.

Transmitter Requirements

| Transmitter Regulation | | | | | | |
|--------------------------------------|-----------------|-----------------|--------------------|-------------|--|--|
| Environmental Phenomena | Frequency Range | FCC Sections | RSS 119 Section | Test Result | | |
| RF Power Output | 450-470 MHz | 2.1046 & 90.205 | 5.4 | Pass | | |
| Occupied Bandwidth Test; Emissions | 450-470 MHz | 2.1049 & 90.209 | 5.5 | Pass | | |
| Masks | | | | | | |
| Spurious RF Conducted Emissions | 1-4700 MHz | 2.1051 & 90.210 | 5.8 | Pass | | |
| Field Strength of Spurious Radiation | 30-4700 MHz | 2.1053 | 5.3 | Pass | | |
| Frequency Vs. Temperature | 450-470 MHz | 2.1055 & 90.213 | 5.3 | Pass | | |
| Frequency Vs. Voltage | 450-470 MHz | 2.1055 & 90.213 | 5.3 | Pass | | |
| Transient Frequency Behavior | 450-470 MHz | 90.214 | 5.9 | Pass | | |

RP-9272A Rev. 1 Page 3 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

3.0 EQUIPMENT UNDER TEST (EUT) DETAILS

3.1 EUT Description

The EUT is a Water Meter Transmission Unit (MTU). The MTU is a battery powered device that is mounted directly on a gas meter and sends data over a narrow-band RF transmission link. The EUT is a 450-470 MHz transceiver, manufactured by Aclara Technologies, LLC. The RF communications link is encrypted in both directions. The EUT was in good working condition during the tests, with no known defects.

Modulated Signal Parameters:

| Data Rate | 7232 Baud |
|---------------------|-------------------------------|
| Encoding | NRZ, Non-return-to-zero |
| Number of Data Bits | 488 bits max |
| Modulation | 2GFSK with +/-2.0KHz Dev Typ. |

Antenna Options There are currently two authorized antenna options:

- The internal antenna etched into the PCB. (Gain = 2 dBi) 1.
- The external antenna: MicroAnt Alcara P/N 073-3002 (Gain = 3 dBi) 2.

The firmware of the EUT during the tests is "FCC TEST CODE". That code is identical to what would be released, except it allows for transmissions to continue for long periods of time, as required for the Regulatory tests.

4.0 TESTED SYSTEM DETAILS

4.1 Tested System Configuration

The system was configured for testing in a typical fashion. The testing was performed in conditions as close as possible to installed conditions. Wiring was consistent with manufacturer's recommendations. The identification for all equipment, used in the tested system, is:

Tested System Configuration List

| Item | Description Ty | /pe* | Manufacturer | Model Number | Serial Number |
|------|-------------------------------|------|--------------------------|--------------|---------------|
| 1 | Water Meter Transmission Unit | Е | Aclara Technologies, LLC | 2019-006 | 2001990037 |
| 2 | Water Meter Transmission Unit | Е | Aclara Technologies, LLC | 2019-006 | 2001990038 |
| 3 | Water Meter Transmission Unit | Ε | Aclara Technologies, LLC | 2019-006 | 2001990039 |

^{*} Type: E = EUT

4.2 Operating Conditions of EUT

The EUT was in a normal operating mode during the tests. All circuits were activated during the tests. Power was supplied with a new battery.

The EUT was operated using Aclara's "RF Test Mode App Version 0.4.6". The settings used are as follows:

| Description | Extended | Standard |
|------------------|----------|----------|
| XCVR Parameters | 1 | 0 |
| XCVR Power Level | 10 | 10 |

RP-9272A Rev. 1 Page 4 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

| Description | Extended | Standard |
|---|----------|----------|
| Nominal Standard Range PA PWM (on counts out of 1000) | 108 | 108 |
| Nominal Extended Range PA PWM (on counts out of 1000) | 225 | 267 |
| PA PWM Frequency Compensation Factor | 68 | 120 |
| PA PWM Temperature Compensation Factor | 34 | 31 |

The EUT was set to 2GFSK modulation.

4.3 Special Accessories

No special accessories were used during the tests in order to achieve compliance.

4.4 Equipment Modifications

No modifications were made to the EUT at Radiometrics' test facility in order to comply with the standards listed in this report.

5.0 TEST SPECIFICATIONS AND RELATED DOCUMENTS

| Document | Date | Title |
|------------------------|------|---|
| FCC CFR Title 47 | 2019 | Code of Federal Regulations Title 47, Chapter 1, Federal Communications Commission, Part 15 & 90 - Radio Frequency Devices |
| ANSI C63.4-2014 | 2014 | Methods of Measurement of Radio Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz |
| TIA-603-D | 2010 | Land Mobile FM or PM Communications Equipment – Measurement and Performance Standards |
| IC RSS-Gen Issue 4 | 2014 | General Requirements and Information for the Certification of Radiocommunication Equipment (RSS-Gen) |
| IC RSS-119 Issue 12 | 2015 | Radio Transmitters and Receivers Operating in the Land Mobile and Fixed Services in the Frequency Range 27.41-960 MHz |

RSS-Gen & RSS-119 are not currently in Radiometrics' Scope of Accreditation, however it uses the procedures from TIA-603-D and ANSI C63.4 that are in Radiometrics Scope of Accreditation

6.0 RADIOMETRICS' TEST FACILITIES

The results of these tests were obtained at Radiometrics Midwest Corp. in Romeoville, Illinois, USA. Radiometrics is accredited by A2LA (American Association for Laboratory Accreditation) to conform to ISO/IEC 17025: 2017 "General Requirements for the Competence of Calibration and Testing Laboratories". Radiometrics' Lab Code is 121191 and Certification Number is 1495.01. A copy of the accreditation can be accessed on our web site (www.radiomet.com). Radiometrics accreditation status can be verified at A2LA's web site (www.a2la2.org).

The following is a list of shielded enclosures located in Romeoville, Illinois used during the tests:

Chamber A: Is an anechoic chamber that measures 24' L X 12' W X 12' H. The walls and ceiling are fully lined with ferrite absorber tiles. The floor has a 10' x 10' section of ferrite absorber tiles located in the center. Panashield of Rowayton, Connecticut manufactured the chamber. The enclosure is NAMAS certified.

Chamber B: Is a shielded enclosure that measures 20' L X 12' W X 8' H. Erik A. Lindgren & Associates of Chicago, Illinois manufactured the enclosure.

RP-9272A Rev. 1 Page 5 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

- Chamber C: Is a shielded enclosure that measures 17' L X 10' W X 8' H. Lindgren RF Enclosures Inc. of Addison, Illinois manufactured the enclosure.
- Chamber E: Is a custom-made anechoic chamber that measures 52' L X 30' W X 18' H. The walls and ceiling are fully lined with RF absorber. Pro-shield of Collinsville, Oklahoma manufactured the chamber.

A separate ten-foot long, brass plated, steel ground rod attached via a 6-inch copper braid grounds each of the above chambers. Each enclosure is also equipped with low-pass power line filters.

The FCC has accepted these sites as test site number US1065. The FCC test site Registration Number is 732175. Details of the site characteristics are on file with the Industry Canada as site number IC3124A.

7.0 DEVIATIONS AND EXCLUSIONS FROM THE TEST SPECIFICATIONS

There were no deviations or exclusions from the test specifications.

8.0 CERTIFICATION

Radiometrics Midwest Corporation certifies that the data contained herein was taken under conditions that meet or exceed the requirements of the test specification. The results relate only to the EUT listed herein. Any modifications made to the EUT subsequent to the indicated test date will invalidate the data and void this certification.

10.0 TEST SECTIONS

10.1 Peak Output Power

The peak power was measured by connecting the EUT antenna port to the spectrum analyzer via a low loss coaxial cable and an appropriate power attenuator.

| 469.9750 | 8.60 | 20.3 | 28.9 | 0.776 | 3.0 | 0.944 | | |

Judgement: Pass

The fundamental emission ERP limit is 100 watts (50 dBm) for an 8 km service area radius.

Note that in decibel units:

ERP = EIRP - 2.15 = P + G - 2.15

where:

RP-9272A Rev. 1 Page 7 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

P = transmitter output power in dB(W)

G = Gain of the transmitting antenna in dBi

3 dBi is the maximum gain allowed by the product specification.

10.2 Occupied Bandwidth; Emissions Masks

| Model | 2019-006 | Specification | FCC Part 90.209 & 90.210 RSS-119 Section 5.5 | | |
|----------------|--|---------------|---|--|--|
| Serial Number | 2001990039 | Test Date | 04-09-2020; 04-14-2020 | | |
| Test Personnel | Richard Tichgelaar | Test Location | Chamber B | | |
| Test Equipment | Spectrum Analyzer (REC-21), (REC-43) | | | | |

The spectrum analyzer was set to the MAX HOLD mode to record the worst case of the modulation. The EUT was transmitting at its maximum data rate. The trace was allowed to stabilize. All Channels are 12.5 kHz. The emissions Mask D is from FCC part 90.210.

- (1) On any frequency from the center of the authorized bandwidth f0 to 5.625 kHz removed from f0: Zero dB.
- (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (fd in kHz) of more than 5.625 kHz but no more than 12.5 kHz: At least 7.27(fd -2.88 kHz) dB.
- (3) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (fd in kHz) of more than 12.5 kHz: At least 50 + 10 log (P) dB.

For all Frequencies beyond 25 kHz from the center of the transmit frequency, the worst-case limit was used. The red line is a 50-dB reduction from carrier based on 1 watt.

The fundamental emission ERP limit is 100 watts (50 dBm) for an 8 km service area radius.

Judgment: Passed by at least 10 dB.

10.4 Field Strength of Unwanted Spurious Radiation

10.4.1 Test Procedures

Radiated emission measurements in the Restricted bands were performed with linearly polarized broadband antennas. The results obtained with these antennas can be correlated with results obtained with a tuned dipole antenna. A 10 dB linearity check is performed prior to start of testing in order to determine if an overload condition exists. From 30 to 4700 MHz, a spectrum analyzer with a preselector was used for measurement. Radiated emissions measurements were performed at the anechoic chamber at a test distance of 3 meters. The entire frequency range from 30 to 4700 MHz was slowly scanned and the emissions in the restricted frequency bands were recorded. Measurements were performed using the peak detector function.

The spectrum analyzer was adjusted for the following settings:

- 1) Resolution Bandwidth = 100 kHz for spurious emissions below 1 GHz, and 1 MHz for spurious emissions above 1GHz.
- 2) Video Bandwidth = 300 kHz for spurious emissions below 1 GHz, and 3 MHz for spurious emissions above 1 GHz.
- 3) Sweep Speed slow enough to maintain measurement calibration.
- 4) Detector Mode = Positive Peak.

The transmitter to be tested was placed on the turntable in the standard test site, or an FCC listed site compliant with ANSI C63.4. The transmitter is transmitting into a non-radiating load that is placed on the turntable. Measurements were made from the lowest radio frequency generated in the equipment to the tenth harmonic of the carrier. The transmitter was keyed during the tests.

RP-9272A Rev. 1 Page 32 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

For each spurious frequency, the test antenna was raised and lowered from 1 m to 4m to obtain a maximum reading on the spectrum analyzer with the test antenna at horizontal polarity. Then the turntable was rotated 360°to determine the maximum reading. This procedure was repeated to obtain the highest possible reading. This maximum reading was recorded.

Each measurement was repeated for each spurious frequency with the test antenna polarized vertically.

Figure 1. Drawing of Radiated Emissions Setup

ANSI C63.4 Listed Test Site

Notes:

- Test Antenna height varied from 1 to 4 meters
- Distance from antenna to tested system is 3 meters
- Not to Scale

| | Frequency MHz | Test Antenna | Substitution Antenna | Receiver to Coupler | Signal Generator |
|---|------------------|-----------------|-------------------------|---------------------|---------------------|
| ĺ | 30 - 200 | ANT-80 | ANT-79 | REC-20 | SIG-31 |
| ĺ | 200 - 1000 | ANT-68 | ANT-06 | REC-20 | SIG-31 |
| | 1000-5000 | ANT-36 | ANT-13 | REC-20 | SIG-31 |

The transmitter was removed and replaced with a broadband substitution antenna. The substitution antenna is calibrated so that the gain relative to a dipole is known. The center of the substitution antenna was approximately at the same location as the center of the transmitter.

RP-9272A Rev. 1 Page 33 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

The substitution antenna was fed at the transmitter end with a signal generator connected to the antenna by means of a non-radiating cable. With the antennas at both ends horizontally polarized, and with the signal generator tuned to a particular spurious frequency, the test antenna was raised and lowered to obtain a maximum reading at the spectrum analyzer. The level of the signal generator output was adjusted until the previously recorded maximum reading for this set of conditions was obtained.

The measurements were repeated with both antennas horizontally and vertically polarized for each spurious frequency.

The power in dBm into a reference ideal half-wave dipole antenna was calculated by reducing the readings obtained in steps k) and l) by the power loss in the cable between the generator and the antenna, and further corrected for the gain of the substitution antenna used relative to an ideal half-wave dipole antenna by the following formula:

Pd(dBm) = Pg(dBm) - cable loss (dB) + antenna gain (dB)

where:

Pd is the dipole equivalent power and

Pg is the generator output power into the substitution antenna.

The Pd levels record in step m) are the absolute levels of radiated spurious emissions in dBm.

Any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows:

On any frequency removed from the center of the authorized bandwidth by a displacement frequency (fd in kHz) of more than 12.5 kHz: At least 50 + 10 log (P) dB.

Since by mathematical definition, P(dBm) - (50+10xLOG P(W)) = -20 dBm, the limit for spurious emissions was set to -20 dBm equivalent radiated power.

No other radiated emissions were detected within 15 dB of the limits from 30 MHz to 4.7 GHz.

RP-9272A Rev. 1 Page 35 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

Judgment: Passed by at least 15 dB.

10.5 Frequency Stability

10.5.1 Frequency Stability Vs Temperature

The chamber was then set to the lowest temperature. The transmitter was in the chamber and allowed to stabilize for 15 minutes. The transmitter was then keyed, and the frequency was recorded. The chamber was then incremented in 10°C steps with a minimum of 15-minute stabilization period for each temperature measurement. The transmitter was off during the temperature transitions.

10.5.2 Frequency Stability Vs Supply Voltage

The EUT was allowed to stabilize with the nominal primary power supply voltage applied. The primary input voltage was varied from the lowest to the highest rated levels specified by the manufacturer. Frequency readings were taken at increments of 0.2 VDC, tested to Battery End point.

Test Requirements: Limit is 2.5 ppm

Judgement: Pass

10.6 Transient Frequency Behavior

10.6.1 Test method

The test was performed in accordance to TIA-603-D Section 2.2.19.3 Alternate Method of Measurement (Using a Test Receiver). The equipment was connected as shown below.

10.6.2 Limits of transient frequency

| Time intervals 1,2 | Maximum Frequency Difference ³ | 421 to 512 MHz Equipment Operating on 12.5 kHz Channels |
|-----------------------------|--|--|
| t ₁ ⁴ | ±12.5 kHz | 10.0 mSec |
| t ₂ | ±6.25 kHz | 25.0 mSec |
| t ₃ ⁴ | ±12.5 kHz | 10.0 mSec |

¹_{on} is the instant when a 1 kHz test signal is completely suppressed, including any capture time due to phasing. t₁ is the time period immediately following t_{on}.

RP-9272A Rev. 1 Page 37 of 46

t₂ is the time period immediately following t₁.

t₃ is the time period from the instant when the transmitter is turned off until t_{off}.

t_{off} is the instant when the 1 kHz test signal starts to rise.

 $^{^2}$ During the time from the end of t_2 to the beginning of t_3 , the frequency difference must not exceed the limits specified in § 90.213.

³ Difference between the actual transmitter frequency and the assigned transmitter frequency.

⁴ If the transmitter carrier output power rating is 6 watts or less, the frequency difference during this time period may exceed the maximum frequency difference for this time period.

Test Report for the Aclara, Water MTU, Model 2019-006

Judgement: Pass

10.6.4 Results for Time Periods t1, t2, and t3

The EUT passed the 6.25 kHz limit so the 12.5 limit is not shown.

RP-9272A Rev. 1 Page 38 of 46

^{*}Since the transmitter carrier output power is less than 6 watts, the frequency difference during the t3 time period may exceed the maximum frequency difference for this time period.

Test Report for the Aclara, Water MTU, Model 2019-006

Note: The date stamp on the plots should read "22 April 2020."

RP-9272A Rev. 1 Page 39 of 46

Test Report for the Aclara, Water MTU, Model 2019-006

10.6.5 Results for Time Period between t2 and t3

The limit between t2 and t3 on all the scope traces are calculated for the 450 MHz Channel since this is the lowest limit. This limit is 450 MHz * 2.5 ppm or 1125 Hz.

RP-9272A Rev. 1 Page 40 of 46

10.7 Radiated Emissions (Receive Mode)

Radiated emission measurements were performed with linearly polarized broadband antennas. The results obtained with these antennas can be correlated with results obtained with a tuned dipole antenna. The radiated emission measurements were performed with a spectrum analyzer. The bandwidth used from 150 kHz to 30 MHz is 9 or 10 kHz and the bandwidth from 30 MHz to 1000 MHz is 100 or 120 kHz. Above 1 GHz, a 1 MHz bandwidth is used. A 10-dB linearity check is performed prior to start of testing in order to determine if an overload condition exists.

From 30 to 2000 MHz, an Anritsu spectrum analyzer was used. Final radiated emissions measurements were performed inside of an anechoic chamber at a test distance of 3 meters. The anechoic chamber is designated as Chamber E. This Chamber meets the Site Attenuation requirements of ANSI C63.4 and CISPR 16-1. Chamber E is located at 12 East Devonwood Ave. Romeoville, Illinois EMI test lab.

The entire frequency range from 30 to 2000 MHz was slowly scanned with attention paid to those frequency ranges which appeared high. Measurements were performed using two antenna polarizations, (vertical and horizontal). The worst-case emissions were recorded. All measurements may be performed using either the peak, average or quasi-peak detector functions. If the peak detector data exceeds or is marginally close to the limits, the measurements are repeated using a quasi-peak detector or average function as required by the specification for final determination of compliance.

The detected emission levels were maximized by rotating the EUT, adjusting the positions of all cables, and by scanning the measurement antenna from 1 to 4 meters above the ground.

10.7.1 Radiated Emissions Field Strength Sample Calculation

The field strength is calculated by adding the Antenna Factor and Cable Loss, and by subtracting the Amplifier Gain from the measured reading. The basic equation is as follows:

FS = RA + AF + CF - AG

Where: FS = Field Strength

RA = Receiver Amplitude

AF = Antenna Factor

CF = Cable Attenuation Factor

AG = Amplifier Gain

Note 1; Peak reading meeting the average limit, so the average reading is not required. Judgment: Pass by at least 10 dB

RP-9272A Rev. 1 Page 45 of 46

Radiometrics Midwest Corporation

Test Report for the Aclara, Water MTU, Model 2019-006

Radiated emissions in a graphical format. The above chart is the same data as the previous table. The peak limit is not shown, since the peak readings meet the lower average limit.

11.0 MEASUREMENT INSTRUMENTATION UNCERTAINTY

| Measurement | Uncertainty |
|--|----------------------|
| Radiated Emissions, E-field, 3 meters, 30 to 200 MHz | 3.3 dB |
| Radiated Emissions, E-field, 3 meters, 200 to 1000 MHz | 4.9 dB |
| Radiated Emissions, E-field, 3 meters, 1 to 18 GHz | 4.8 dB |
| 99% Occupied Bandwidth using REC-43 | 1% of frequency span |
| Conducted power PWM-01 at 460 MHz | 0.14 dB |
| Amplitude measurement 1-5000 MHz | 1.5 dB |
| Temperature THM-02 | 0.6 Deg. C |

The uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k=2 in accordance with CISPR 16-4-2.

RP-9272A Rev. 1 Page 46 of 46
