RE : Application for obtaining a transmitter approval
Attached Application Form 731
FCC ID: LLB9975

Dear Sir or Madam:

Hexagram Inc. wishes to obtain an approval for a telemetry transceiver with the FCC ID LLB9975. The specifics of this transceiver: the LLB9975 transceiver is installed within a data collection unit [DCU].

Previously, identically transmitters of Hexagram are approved by FCC.

The differences in a current application are:

- Transceiver is the 2-way communication device, which includes a Transmitter and a Receiver.
- The transmitter section has no principal difference compare to previous one. Much efficient power amplifier is used to prolong product life and enhance product quality.
- A new microcontroller is applied to increase accuracy of meter reading and perform 2-way communication.
- Consequently, the DCU is modified and imbedded software are redesigned to fit new RF circuitry.

Complete information about LLB9975 device is documented in the attached circuit schematics and photographs.

The LLB9975 transmitter was tested for conformance to the technical requirements of 90.201 Subpart I-General Technical Standards. Results of tests are attached to this application. The LLB9975 was found to be in conformance with all technical requirements of 90.201.

Sincerely,

Lazar Feldman
