The electromagnetic interference and RF tests, which this report describes, were performed by an independent engineering consultancy firm, ITC Engineering Services, Inc. (ITC), in accordance with the requirements specified in the FCC rules, 47CFR Part 15, Subparts B and C. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical characteristics. Any modifications specified in this report for compliance must be implemented in all production units for compliance to be maintained.

Tests Performed:

Emissions Requirements:

- OPEN FIELD RADIATED EMISSIONS in accordance with the FCC PART 15 Sub-Part B.

RF Requirements:

- FIELD STRENGTH OF FUNDAMENTAL in accordance with the FCC 47 CFR 15.209.
- HARMONIC EMISSIONS in accordance with the FCC 47 CFR 15.209.
- SPURIOUS EMISSIONS in accordance with the FCC 47 CFR 15.209.

Declaration/Disclaimer

ITC Engineering Services, Inc. (ITC) reports apply only to the specific samples tested under stated test conditions. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. ITC Engineering Services, Inc. shall have no liability for any deductions, inferences or generalizations drawn by the client or others from ITC Engineering Services, Inc. issued reports.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full with our written approval. The applicant/manufacturer shall not use this report to claim product endorsement by NIST, NVLAP or any US Government agency.

ITC Engineering Services, Inc. (ITC) is:

Accepted by the Federal Communications Commission (FCC) for FCC Methods, CISPR Methods and AUSTEL Technical Standards (Ref: NVLAP Lab Code 200172-0)

Approved by the Industry Canada for Telecom Testing

Certified by Rockford Engineering Services GmbH for EMC Testing according to the European EMC Directive 89/336/EEC per EN45001

Certified by Reg. TP for EMC Testing according to the European EMC Directive 89/336/EEC per EN45001 for RES GmbH (DAR-Registration number: TTI-P-G 159/98-00)

Certified by the Voluntary Control Council for Interference by Information Technology Equipment (VCCI) for EMC testing, in accordance with the Regulations for Voluntary Control Measures, Article 8, Registration Numbers - Site 1: C-1582 and R-1497.

PART 1 General (Cont)

Test Methodology

The electromagnetic interference and RF tests, which this report describes, were performed by an independent engineering consultancy firm, ITC Engineering Services, Inc. (ITC), in accordance with the FCC test procedure ANSI C63.4-2003

Test Facility

The open area test site, the conducted measurement facility, the semi anechoic chamber and the test equipment used to collect the emissions and RF data is located in Sunol, California, and is fully described in site attenuation report. The approved site attenuation description is on file at the Federal Communications Commission.

Radiated emission up to 75 GHz	± 3 dB	

PART 2 RECEIVER MEASUREMENTS

OPEN FIELD RADIATED EMISSIONS

Test Specification: 47 CFR PART 15, Sub-Part B

EUT Description.

Connaught's product 5.8GHz microwave sensor, models; 902921 and 902922 (or the EUTs) as referred to in this report are intentional radiators. The units are similar both in design and functionality. One of the EUTs (model 902922) was tested and based on engineering judgment, the results hold for both models. The EUT was set up at 1, 3 or 10 meters in accordance with the suggested configuration given in FCC Measurement Procedure ANSI C63.4-2003. The measurement instrumentation used was a receiver with bandwidth parameters as stipulated in ANSI C63.4-2003. The 5.8GHz Microwave Sensor was set up on a wooden non-conductive tabletop, 80 cm above the ground reference plane, in an open field. The transmit function was not activated for the tests.

Description	Manufacturer	Model No.	Serial No.	Calibration Due
DC Power Supply	BK Precision	1688		n/a
Digital Multimeter	Fluke	16	79510141	December 14, 2005

Test Procedure – Radiated Emissions Tests

The measurement range investigated was from 30 MHz to 18 GHz due to lack of emissions activity above 5.8GHz. For measurements below 1GHz, the 5.8 GHz Microwave Sensor (the EUT) was set up at 10 meters from the receiving antenna, on an Open Area Test Site (OATS) with the EUT running in a continuous mode. The EUT was rotated 360 degrees azimuth and the search antenna height varied 1 to 4m in order to maximize the emissions. Significant peaks from the EUT were then recorded to determine margin to the limits. For measurements above 1GHz, the EUT was set up at 3 meters from the antenna, on the OATS, with the EUT running in a continuous mode. The EUT was rotated 360 degrees azimuth and the search antenna height varied 1 to 4m in order to maximize the emissions. Significant peaks from the EUT were then recorded to determine margin to the limits. For measurements above 18GHz, the EUT was set up at a 1 meter from the receiving in a semi-anechoic chamber with the EUT running in a continuous mode. The EUT was rotated 360 degrees azimuth and the search antenna height varied 1 to 4m in order to maximize the emissions. Significant peaks from the EUT were then recorded to determine margin to the limits.

OPEN FIELD RADIATED EMISSIONS (cont)

Spectrum Analyzer Configuration (during swept frequency scans) – Radiated Emissions

IF Bandwidth..... 120 kHz
 Measurements below 1000 MHz (unless stated otherwise)
 Analyzer Mode (for Peak Measurements) Peak/Log
 Resolution Bandwidth 100 kHz
 Video Bandwidth..... 100 kHz
 Analyzer Mode (for Quasi-Peak Measurements)
 Quasi-Peak/Linear Resolution Bandwidth..... 1000 kHz
 Video Bandwidth..... 1000 kHz
 Measurements above 1000 MHz (unless stated otherwise)
 Quasi-Peak Adapter Mode Disabled
 Analyzer Mode (for Peak Measurements) Peak
 Resolution Bandwidth 1000 kHz
 Video Bandwidth..... 1000 kHz
 Analyzer Mode (for Average Measurements) Video Filter
 Resolution Bandwidth 1000 kHz
 Video Bandwidth..... 10 Hz

Table 5 Data Table Legend and Field Strength Calculation – Radiated Emissions Tests

Detector mode: Peak (P) or Quasi-Peak (QP) or Average (A)

	Polarization	Antenna	Freq Range (MHz)
VB	Vertical	EMCO 3104/sn. 4463 Biconical	30 – 200
HB	Horizontal	EMCO 3104/sn. 4463 Biconical	30 – 200
VL	Vertical	EMCO 3146/sn. 2261 Log Periodic	200 – 1000
HL	Horizontal	EMCO 3146/sn. 2261 Log Periodic	200 – 1000
VH1	Vertical	EMCO 3115/sn. 8812-3050 Horn	Below 18000
HH1	Horizontal	EMCO 3115/sn. 8812-3050 Horn	Below 18000
VH2	Vertical	HP 3116/sn. 4663 Horn	Below 26500
HH2	Horizontal	HP 3116/sn. 4663 Horn	Below 26500
VH4	Vertical	S&D DBD-520 Horn	Below 75000
HH4	Horizontal	S&D DBD-520 Horn	Below 75000

The margin in the Table 6 is calculated as follows:

Margin = Corrected Amplitude – Limit, where Corrected Amplitude = Spectrum Analyzer Amplitude + Cable Loss + Antenna Factor – Pre-Amp Gain.

PART 3 RF MEASUREMENTS

Test Specification: 47 CFR PART 15, Sub-Part C

EUT Description:

Connaught's product 5.8GHz microwave sensor, models; 902921 and 902922 (or the EUTs) as referred to in this report are intentional radiators. The units are similar both in design and functionality. One of the EUTs (model 902922) was tested and based on engineering judgment, the results hold for both models. The EUT comes with an antenna permanently attached. The EUT, was set up on a wooden table, 80cm above the ground reference plane in an anechoic chamber and or on an open field. It was powered and tested in normal continuous mode.

Supply Voltage Tested: 13.5VDC

General Test Procedure – RF Tests

For the spurious and harmonics measurements, below 18GHz, the 5.8 GHz Microwave Sensor (the EUT) was set up at a 3 meter distance from the receiving antenna, on an Open Area Test Site (OATS), with the EUT running in a continuous mode. The EUT was rotated 360 degrees azimuth and the search antenna height varied 1 to 4m in order to maximize the emissions. Significant peaks from the EUT were then recorded to determine margin to the limits. For measurements above 18GHz, the EUT was set up at a 1 meter distance from the antenna, in a semi-anechoic chamber, with the EUT running in a continuous mode. The EUT was rotated 360 degrees azimuth and the search antenna height varied 1 to 4m in order to maximize the emissions. Significant peaks from the EUT were then recorded to determine margin to the limits.

For the field strength measurements of the fundamental frequency, the EUT was setup in an anechoic chamber at a 3 meter distance from the receiving antenna. The EUT was rotated 360 degrees azimuth and the search antenna height varied 1 to 4m in order to maximize the field strength emission of the fundamental. The maximum level of the fundamental emission from the EUT was measured and recorded at optimum antenna and table orientation to determine margin to the limits.

FIELD STRENGTH OF FUNDAMENTAL

FIELD STRENGTH Measurement

The EUT was set up as described above. The measurement instrumentation used was an Analyzer with bandwidth parameters as stipulated in ANSI C63.4-2003.

Site Used – Field Strength of Fundamental Measurements

- ☐ Test Site 1 - Shielded Room: 16' x 12' x 9'
- ☐ Test Site 1 - 3m Open Field Radiated Site
- ☐ Test Site 1 - 10m Open Field Radiated Site
- ☐ Test Site 2 - Environmental Lab
- ☐ EMC Lab 1 - Test Laboratory
- ☒ Semi-Anechoic Absorber Lined Shielded Room
- ☐ Other: _____

Administrative Details and Environmental Conditions – Field Strength of Fundamental Measurements

Test Date(s):	July 11, 2005
Test Engineer(s):	Bob Kershaw & Femi Ojo
Temperature	70.5°F
Humidity	42%

Test Data – Field Strength of Fundamental

The measurement plot below represents the maximum worst-case result from the measurement performed in accordance to the requirements of this section.

Field Strength of Fundamental Plot.

Figure 5: Plot of Field Strength of Fundamental Peak Measurement.

FIELD STRENGTH OF FUNDAMENTAL (cont.)

INDICATED		CORRECTION		CORR	TURNTABLE ANT			CLASS A		CLASS B		
FREQ	AMPL	ANT	CAB / AMP	AMPL	ANG	HT	POL	AMPL	MARG	AMPL	MARG	DET
GHz	dBuV/m	dB	dB	dBuV/m	DEG	m	-	dBuV/m	dB	dBuV/m	dB	MODE
5.720	47.2	34.3	-29.3	52.2	90	1.0	VH	-	-	74	-21.8	p
5.723	45.7	34.3	-29.3	50.7	0	1.0	HH	-	-	74	-23.3	p

Table 12: Field Strength of Fundamental Test Data – Peak Measurement

The margin in Table 12 is calculated as follows:

Margin = Corrected Amplitude – Limit, where Corrected Amplitude = Spectrum Analyzer Amplitude + Cable Loss + Antenna Factor – Pre-Amp Gain.

Test-Data Summary – Peak Measurement:

Center Frequency = 5800 MHz
Peak Level: = 52.2dBμV/m
Peak Limit (15.209) = 74.00dBμV/m (54dBμV/m + 20dB)

Average Level Calculation of Field Strength of Fundamental with Duty Cycle correction.

The duty cycle rating as provided by the manufacturer is 0.83% (or 0.0083) over a 100mSec interval = 0.0083 seconds.

dB (in μV) Duty Cycle Correction	= 0.0083 secs	= 20log(0.0083)	= -41.62dBμV
Pulse Desensitization Factor (PDF)	= -40dB		
Peak Level with PDF	= 52.2 dBμV/m + 40dB		= 92.2dBμV/m
Peak Level with Duty Cycle Correction	= 92.2dBμV/m – 41.62dB		= 50.58dBμV/m

Test-Data Summary – Average Measurement:

Center Frequency = 5800 MHz
Average Level: = 50.58dBμV/m (Calculated).
Average Limit (15.209) = 54.00dBμV/m

Conclusion

The 5.8 GHz Microwave Sensor meets the requirements of the test reference for Fundamental Frequency Field Strength.

FIELD STRENGTH OF FUNDAMENTAL (cont.)

OCCUPIED BANDWIDTH measurement

For the measurements, a spectrum analyzer was used. The EUT was measured according to the method specified in ANSI C63.4-2003.

Site Used – Occupied Bandwidth Measurements

- ☐ Test Site 1 - Shielded Room: 16' x 12' x 9'
☒ Test Site 1 - 3m Open Field Radiated Site
☐ Test Site 1 - 10m Open Field Radiated Site
☐ Test Site 2 - Environmental Lab
☐ EMC Lab 1 - Test Laboratory
☒ Semi-Anechoic Absorber Lined Shielded Room

Administrative Details – Occupied Bandwidth Measurements

Test Date(s):	July 11 , 2005
Test Engineer(s):	Bob Kershaw & Femi Ojo
Temperature	70.5°F
Humidity	42%

Test Measurement: Occupied Bandwidth Measurements (Performed in Anechoic Chamber)

The EUT was set up on a wooden non-conductive tabletop, 80 cm above the ground plane of the test location. Pre-scan measurements were first performed with a spectrum analyzer at 3 meter from a receiving antenna, in a Semi-Anechoic Chamber at the pre-determined worst-case height at 1 meter and in vertical polarity. The EUT running in continuous mode and was rotated 360 degrees azimuth in its x-y-z axis positions. It was also measured in the horizontal polarity. The analyzer was then placed in 'max-hold' mode to record signal level.

Spectrum Analyzer Configuration (during swept frequency scans) – Occupied Bandwidth

Start Frequency 5.300 GHz
 Stop Frequency 6.300 GHz
 Sweep Speed 100 mSecs
 RES Bandwidth..... 1000 kHz
 Video Bandwidth..... 1000 kHz
 Quasi Peak Adapter Mode Bypass
 Quasi peak Adapter Bandwidth Disabled

FIELD STRENGTH OF FUNDAMENTAL (cont.)

Occupied Bandwidth Measurement Plot

The plot and test data below represents the maximum worst-case results from the measurements performed in accordance to the requirements of the standard and extreme test conditions specified at the beginning of this Part.

Spectrum Mask Measurement

Figure 6: Occupied Bandwidth Plot

Test-Data Summary – Occupied Bandwidth:

Center frequency: 5800 MHz
Mask Bandwidth: 275 MHz

Occupied Bandwidth Data:

Upper Frequency (F_u)	$=f_0 + 275/2$	$=5800 \text{ MHz} + 137.5$	$=5937.5 \text{ MHz}$
Lower Frequency (f_L)	$=f_0 - 275/2$	$=5800 \text{ MHz} - 137.5$	$=5662.5 \text{ MHz}$

PART 4 APPENDICES

A. EUT Technical Specification

Applicant	Connaught Electronics, Ltd.			
Product Specifications				
Description	5.8GHz Microwave Sensor			
	Frequency Range	5616.0 MHz to 5984.0 MHz		
	Part Number(s)	CEL	902921 902922	
	Serial Number(s)	1000000000053475 1000000000023277		
	Central Processor	ST72F324L		
	Cable(s)	n/a		
	Peak Output Power	-37.33dBm		
	Mainboard	Manufacturer	CEL	
		Part Number	172154 Rev 1.4	
		Dimension	Approx. 65mm x 59mm	
		Connector(s)	One (1) 6-pin, One (1) 4-pin	
	Antenna Board	Manufacturer	CEL	
		Model	CTX/A 0509	
		Part Number	516299	
		Dimension	Approx. 23mm x 10mm	
		Layers	2-sided	
		Antenna	Two (2) 10mm Dual loop, 1mm traces	
	Ports	One (1) 4-pin		
	Power Supply(s)	DC Cell		
Input		13.5Vdc/50mA		
Output		n/a

C. Modification Letter

To Whom It May Concern:

This is to certify that no modifications were necessary for 5.8GHz Microwave Sensor, models 902921 and 902922 to comply with the required Requirements of:

FCC Rules and Regulations per 47 CFR 15.209

It is the manufacturer's responsibility to ensure that additional production units of the 5.8GHz Microwave Sensor, models 902921 and 902922 are manufactured with identical electrical and mechanical characteristics. For further information, please contact the manufacturer at:

Connaught Electronics, Ltd.
IDA Industrial Estate, Dunmore Road,
Tuam, Co. Galway, Ireland
