TEST REPORT			
REPORT DATE:	9 November 1998	REPORT NO: 98427D/B	
CONTENTS:	See Table of Contents		
SUBMITTOR:	SMARTHOME PRODUCTS LTD. 8/F Block B Rm. B-812, Sea View Estate 2-8 Watson Road North Point, Hong Kong		
SUBJECT:	Model No:	WC815	
	FCC ID:	LQP-R20	
TEST SPECIFICATION:	FCC CFR 47 Part 15.109 IC RSS210 Section 7 NOTE: Tests Conducted Are "Type" Tests.		
DATE SAMPLE RECEIVED:	27 October 1998	DATE TESTED:	2 November 1998
RESULTS:	Equipment tested complies with referenced specification.		
ALTERATIONS	None		
Tested by: IC Site: 2039	Original signed by: Jim Sims	Approved by:	<i>Ed. Khanj.</i>
		<i>JG</i> Robert G. Marshall, P. Eng.	
		Date:	<i>11 NOV. 1998.</i>
<p>THIS REPORT SHALL NOT BE REPRODUCED, EXCEPT IN FULL, WITHOUT THE WRITTEN APPROVAL OF MARSTECH LIMITED. This report was prepared by Marstech Limited for the account of the "Submittor". The material in it reflects Marstech's judgement in light of the information available to it at the time of preparation. Any use which a Third Party makes of this report, or any reliance on decisions to be made based on it, are the responsibility of such Third Parties. Marstech accepts no responsibility for damages, if any, suffered by any Third Party as a result of decisions made or actions based on this report</p>

TEST FACILITY AND EQUIPMENT LIST

FACILITIES

- Radiated ANSI C63.4 (FCC OET/55) open field 3 meter test range. This test range is protected from the cold and moisture by a non-conductive enclosure.
- Conducted 2.5m Anechoic Chamber

EQUIPMENT

Hewlett-Packard spectrum analyzer # 8554 RF & 141T video.
Anritsu 2601 A spectrum analyzer.
Advantest R3261A Spectrum Analyzer
Hewlett-Packard RF generator # 8640 B with an 002 doubler
Hewlett-Packard RF voltmeter # 400 FL.
Hewlett-Packard attenuator 30 dB # 11708A.
Narda 20 watt (20 dB) attenuator
A.H. Systems biconical antenna; 20 MHZ - 330 MHZ
A.H. Systems log periodic antenna; 300 MHZ - 1.8 GHZ
Eaton dipole antennas; T1, T2, T3 25 MHZ - 1.0 GHZ
CDI Roberts dipole antennas; T1, T2, T3 & T4 25 MHZ - 1.0 GHZ

NOTE:

The Anritsu 2601 A spectrum analyzer, the Hewlett-Packard spectrum analyzer and the Advantest R3261A spectrum analyzer are calibrated annually, and that calibration is directly traceable to the National Research Council of Canada (NRC). This equipment is only used by qualified technicians and only for the purpose of EMI measurements. The three meter test range has been carefully evaluated to the ANSI document C63.4 and will be remeasured for reflections and losses every three years.

Re: Measurement facility located at Roseville
(3 meter site)

Gentlemen:

Your submission of the description of the subject measurement facility has been reviewed and found to be in compliance with the requirements of Section 2.948 of the FCC Rules. The description has, therefore, been placed on file and the name of your organization added to the Commission's list of facilities whose measurement data will be accepted in conjunction with applications for certification or notification under Parts 15 or 18 of the Commission's Rules. Our list will also indicate that the facility complies with the radiated and AC line conducted test site criteria in ANSI C63.4-1992. Please note that this filing must be updated for any changes made to the facility, and at least every three years the data on file must be certified as current.

Per your request, the above mentioned facility has been also added to our list of those who perform these measurement services for the public on a fee basis. This list is published periodically and is also available on the Laboratory's Public Access Link as described in the enclosed Public Notice.

Sincerely,

Thomas W. Phillips
Electronics Engineer
Customer Service Branch

SPURIOUS RADIATED EMISSIONS

RESULTS

The maximum field strength of any spurious emission or harmonic, from 25 MHz to 2,000 MHz, while receiving was:

Model WC815

Receiver: **Maximum field strength of 124.3 μ V/M: at 314.24 MHz**

TEST CONDITIONS

Equipment Positioning:

Receiver: laying on its back

Antenna Polarization:

Receiver: horizontal

Measurement Bandwidth:

120 KHz and 1 MHz (IF)

Supply Voltages:

Receiver: 4.5 VDC (3 "D" cell batteries)

METHODS OF MEASUREMENT

The remote door chime receiver, was placed on a one metre high, non-metallic turntable. The EUT was an unmodified sample as supplied by the manufacturer. Power was supplied via 3 standard "D" cell batteries. The remote door chime receiver was set in the receive mode and the entire spectrum up to 2,000 MHz was searched for spurious emissions. All emissions were measured and recorded. The spectrum analyzer used was set in both the PEAK and QUASI-PEAK modes of operation to ensure consistent results. Measurements over 1 GHz were in PEAK mode only.

The receive frequency, 315 MHz, was measured using an external, unmodulated ambient RF carrier signal tuned across the wideband of receiver noise. The unmodulated carrier was emanating from an antenna in the proximity of the receiver. Care was taken so as not to overload the receiver, however the carrier level was varied in amplitude and frequency to obtain the highest level of spurious emissions from the receiver. This external signal was set to cause receiver "quieting" or to cohere the superregenerative receiver and cause single discrete noise components to appear. At this point the largest emission or single frequency component within this band was measured and recorded.

For each of the above conditions the turntable was rotated through 360 degrees while the receiving antenna, at three (3) metres from the EUT, was varied in height from 1 to 4 metres to find the maximum signal strength. The measured level was converted to a field strength using the antenna correction factors and cable losses.

RADIATED EMISSION RESULTS

BW: 100/120QP KHz and 1 MHz
 Span: 05 to 50 MHz

RECEIVER MODEL WC815

TEST #	FREQ. M Hz	LEVEL μ V	ANT. TYPE (PZ)	ANT. FACT.	F.S. μ V/M	LIMIT μ V/M	DIFF. TO LIMIT; dB
01	314.24	11.0	RT.3 H	11.3	124.3	200	-4.13
02	624.95	05.1	L/P H	14.4	73.4	200	-8.70

Note:

- 1) A 16 dB RF preamplifier was used for all above measurements.
