"Description of Circuit Functions"

SMARTHOME PRODUCTS (SHENZHEN) CO., LTD.**MODEL:WC133 CHIME RECEIVER****TECHNICAL DESCRIPTION**

Model WC133 door chime receiver is part of the wireless door chime system series. The circuit is operated at 4.5VDC source. The receiver consists of a single Transistor that is worked as a regenerative detector operating at 315MHz. Its output is connected to a comparator circuit that senses the presence or absence of a received RF carrier signal, thus producing a digital output that is decoded by the digital portion of the circuit.

The circuit is contained on a double printed circuit board which is mounted in a plastic case approximately $109 \times 70 \times 30$ mm. A house coding circuit can be programmed by 16 bits switch to respond to 16 different recognition codes.
