

FCC ID: LU9275107A

Circuit Description

The RLC oscillator drives the base of Q2 the final/buffer amplifier. The modulation provided by microphone. The output of Q2 has the matching network consisting of C9, L2 and L3 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 6.5cm long Metal antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 3 Volt ("AAA" size battery x 2) primary battery

Operation Descriptions

The transmitter is a voice transmitter operating at 100.1MHz band. The transmitter is powered by a 3V battery ("AAA" size battery x 2) and the transmitting frequency is crystal controlled. The operation is achieved by different combinations of form pulse modulating signal on the 100.1MHz carrier frequency.

Remarks:

The transmitter is a 4 button transmitter. The EUT continues to transmit while EUT is switch on. It is button transmitter, Modulation by Microphone; and type is Frequency modulation.
