Application No.: <u>hm155363</u>

Date: 1 November 2005

FCC ID: <u>LU9324218</u>

Circuit Description

The $\underline{49.86}$ MHz crystal oscillator drives the base of $\underline{Q2}$ the final/buffer amplifier. The modulation provided by \underline{IC} . The output of $\underline{Q2}$ has the matching network consisting of $\underline{L3}$ and $\underline{C14}$ that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

There is no external antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 3 Volt ("AA" size battery x 2) primary battery.

Operation Descriptions

The transmitter is a <u>toy car</u> operating at <u>49.86</u>MHz band. The transmitter is powered by a <u>3Volt</u> battery (<u>AA x 2</u>) and the transmitting frequency is crystal controlled. There are <u>2</u> <u>button</u> to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the <u>49.86MHz</u> carrier frequency.

Remarks:

The transmitter is a 2 Button transmitter.

The EUT continues to transmit while **Button** is being pressed.

It is Pulse transmitter, Modulation byIC; and type is Pulse modulation.
