Subject: Comments Response

Hi Dennis,

Referencing your comments of 4/23 regarding FCC ID: LUBBTM-2, here is where we are:

1. See uploaded Modular Approval request letter.
2. See uploaded revised User's Manual
3. See uploaded revised User's Manual
4. See uploaded revised User's Manual
5. See uploaded Radiated Emissions test setup photo
6. See uploaded antenna characteristics exhibit
7. See uploaded revised test report. This was a typo on my part. The original measurements were done as a radiated emissions test. All restricted bands (the entire band actually) from 30 MHz – 25 GHz were examined and the worst case presented in the report.
8. This was also a typo in the original report. The EUT was measured at 3 meters. This has been corrected in the uploaded revised report.
9. See uploaded revised report with average and peak reading for the 2nd harmonic.
10. See uploaded correspondence explaining the amplification of the signal from the radio chip.

Please don't hesitate to contact me if you have any additional comments or questions regarding this project.

Thanks

Best Regards

Bob Cole
