Dear Donna,

Due to a customer request, our current product being the Porsche Base Station with FCC ID: LXP-VIM236 requires retesting and resubmission under a Class II Permissive Change.

The customer request was for an improved RF keyless entry range. To meet this request a Low Noise Amplifier (LNA) was added to the front end of the original receiver/product certified under FCC ID: LXP-VIM236. No other circuitry was modified.

The LNA characteristics are listed in the block diagram provided.

Yours sincerely

A handwritten signature in black ink, appearing to read 'Dino Rischitelli', written over a horizontal line.
