

General Description

The SJB controls many vehicle functions including exterior lighting, interior lighting, security locking, power functions, warnings, communication capabilities (using a CAN interface), as well as providing a fused pass through for other power devices. The SJB also contains a receiver for RKE (remote keyless entry). The receiver is a Super Regen operating at 315MHz ASK.

All versions of the SJB use the same receiver and PCBs (power and electronic). Items ending with 01 (i.e. 659818.21.01) refer to the power board. The difference between the versions is only with the non-populated components. The RF section is the same on all versions.
