Subject: Re: FCC ID: M4Y-0835C (ATCB000362)
Importance: High

Dear Dennis,

Thanks for your kindly advise.

As per your review comments, please see the explanation below:

- 1) The antenna of this device is a PIFA antenna, and the connector is a testing port. I have marked it on the internal photo and have it attached for your reference.
- 2) We have remeasured the Band-edge test. Please find the attached file as file name " revised-band edge plot" for your review.
- 3) Please find the revised manual provided by our client as attachment for your reference.
- 4) Due to the crest factors of DSSS and CW signals are the same (equals to 1), We chose the CW factor of probe calibration, which showed on the plots. We will add the crest factor on the plots.
- 5) We modified the SAR report regarding to your requirement. Please find the revised SAR report attached.

I hope the supplementary satisfy all your requirements for reviewing this project, if you have further question, please feel free to let me know.

Best Regards,

Julia Chu
