

## 10 Appendix A - General Product Information

### Radiofrequency radiation exposure evaluation

This exposure evaluation is intended for **FCC ID: M5LATS2021**

According to KDB 447498 D01v06 section 4.3.1, For frequencies below 100 MHz and test separation distances  $\leq 50$  mm, the Numeric threshold is determined as:

Step a)

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$   
for 1-g SAR

Step b)

$\{[\text{Power allowed at numeric threshold for 50mm in step a)}] + [(\text{test separation distance} - 50\text{mm}) \cdot (f(\text{MHz})/150)]\}$   
mW

Step c) 1)

For test separation distances  $> 50\text{mm}$  and  $< 200\text{mm}$ , the power threshold at the corresponding test separation distance at 100MHz in step b) is multiplied by  $[1 + \log(100/f(\text{MHz}))]$

Step c) 2)

For test separation distances  $\leq 50\text{mm}$ , the power threshold determined by the equation in c) 1) for 50mm and 100MHz is multiplied by  $\frac{1}{2}$ .

>> The fundamental frequency of the EUT is 112kHz, the test separation distance is  $\leq 50\text{mm}$ .  
(Manufacturer specified the separation distance is: 20mm)

Step a)

>> Numeric threshold,  $\text{mW} / 50\text{mm} \cdot \sqrt{0.1\text{GHz}} \leq 3.0$   
Numeric threshold  $\leq 474.3\text{mW}$

Step b)

>> Numeric threshold  $\leq 474.3\text{mW} + (50\text{mm} - 50\text{mm}) \cdot 100\text{MHz}/150$   
Numeric threshold  $\leq 474.3\text{mW}$

Step c) 1) & c) 2)

>> Numeric threshold  $\leq 474.3\text{mW} \cdot [1 + \log 100/100\text{MHz}] \cdot \frac{1}{2}$   
Numeric threshold  $\leq 237.15\text{mW}$

>> The power (calculated power + tune up tolerance) of EUT at 112kHz is: 0.0002mW  
Which is smaller than the Numeric threshold.  
Therefore, the device is exempt from stand-alone SAR test requirements.

**Appendix A**

Power calculation (According to C63.10 chapter 9.5)

	Value	Unit
Field Strength Measured (E)	58.22	dB $\mu$ V/m
Measurement Distance (D)	3	m
Equivalent Isotropically Radiated Power (E.I.R.P in dBm)	-36.94	dBm
Equivalent Isotropically Radiated Power (E.I.R.P in mW)	0.0002	mW

Remark:  $EIRP = E + 20\log(D) - 104.7$   
 (EIRP is in dBm, E is in dB $\mu$ V/m, D is in meters)
