

Manufacturer's Statement:

Test Report: The test report covers both T20 Mifare (1 x transmitter operating at 13.56MHz) and T20 Multi Tech (2 x transmitters operating at 125kHz and 13.56 MHz) although there are differences in hardware. T20 Mifare is a depopulated version of T20 Multi Tech omitting the circuit for the other transmitter. The T20 Mifare (product code C30045X) and T20 Multi Tech (product code C30046X) devices are certified under two separate certification numbers. The statement below was written in the test report:

The model tested, C300460, is a dual mode transmitter operating on 125 kHz and 13.560 MHz.

This report also covers a single mode transmitter, C300450 which operates on 13.560 MHz only, as the dual mode model was determined to be a worst case version based upon the test results in this report.
