

**dB**i Corporation  
FCC Certification Test Report  
Point Six FDEZIO Wireless Sensor  
Report Number 07dB*i*010

Testing Certificate #1985.01

## ADMINISTRATIVE INFORMATION

### **Historical record:**

Because dBi Corporation is a testing entity, and not a manufacturer, this original test report of the FDEZIO wireless sensor is being transmitted to the manufacturer, Point Six. dBi will keep a copy for its historical records and to satisfy A2LA-audit requirements. We strongly recommend archiving the unit that we tested, to facilitate answering future inquiries regarding this product.

### **Retention of records:**

The FCC requires the records for a Class A or Class B product to be retained by the responsible party for at least two years after the manufacture of said product has been permanently discontinued. These records should include the original certification or verification test report, quality audit data, and the test procedures used.

The European Union requires the Declaration of Conformity (DoC) and all supporting data for a product bearing the CE Marking to be retained, and available for inspection by enforcement authorities, for 10 years after placing the product on the market.

Australia and New Zealand require the Declaration of Conformity, test reports, a description of the product, documentation that clearly identifies the product, and paperwork showing the product's brand name, model number, etc. to be kept for at least five years after the product ceases to be supplied to Australia or New Zealand.

### **Measurement uncertainties:**

The Lexmark Electromagnetic Compatibility Laboratory (EMC Lab) has a documented calculation of the measurement uncertainties associated with tests performed at the Lexmark site.

### **Ongoing compliance:**

This report applies only to the sample tested. The manufacturer is responsible for ensuring that the production models of this wireless sensor comply with the FCC and CE Marking requirements, and continue to comply throughout their manufacturing life. The manufacturer should check any changes to the product that could change its interference profile.

### **A2LA approval:**

dBi Corporation has been accredited by the American Association for Laboratory Accreditation (A2LA) for Radiated Emissions and Conducted Emissions, Electromagnetic Interference, and Electrostatic Discharge testing. Copies of our Accreditation Certificate and Scope of Accreditation follow.

The Federal Communications Commission (FCC) recognized the Lexmark site as meeting the requirements of section 2.948 of the FCC Rules in a letter dated December 10, 2001. This information is on file with the FCC under Registration No. 949691.

**Please note:** This report may be copied as needed, as long as it is copied in its entirety.

THE AMERICAN ASSOCIATION FOR  
LABORATORY ACCREDITATION

## ACCREDITED LABORATORY

A2LA has accredited

**DBI CORPORATION**  
Lexington, KY

for technical competence in the field of

### Electrical Testing

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005 *General Requirements for the Competence of Testing and Calibration Laboratories*. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated 18 June 2005).

Presented this 30<sup>th</sup> day of October 2006.

  
President  
For the Accreditation Council  
Certificate Number 1985.01  
Valid to September 30, 2008

For the tests or types of tests to which this accreditation applies,  
please refer to the laboratory's Electrical Scope of Accreditation.

**American Association for Laboratory Accreditation**

SCOPE OF ACCREDITATION TO ISO/IEC 17025:2005

dBi CORPORATION<sup>1</sup>  
216 Hillsboro Avenue  
Lexington, KY 40511-2105  
John R. Barnes Phone: 859 253 1178

**ELECTRICAL (EMC)**

Valid To: September 30, 2008

Certificate Number: 1985.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following tests:

| <u>Test Technology</u>          | <u>Test Method(s)</u>                                                                                                                                                                     |

<sup>1</sup> NOTE: Testing is performed using the equipment and facilities at Lexmark International EMC Laboratory (A2LA Accreditation Certificate 0872.01)

**ADMINISTRATIVE DATA**

**Manufacturer:** Point Six, Inc.  
2333 Alumni Park Plaza, Suite 305  
Lexington, KY 40517

**Appliance/Product:** IR field disturbance counter

**Model/Type Number:** FDEZIO

**FCC ID:** M5ZFDEZIO

**Rating:** 3.6Vdc (Lithium battery)

**Suppression Components:** see attached sheet

**Measurement Equipment used:** see attached sheet.

**Measurements According to, and Sample Unit Complies with:** FCC 47 CFR Part 15-2006

**Report Prepared By:** John R. Barnes KS4GL, PE, NCE, NCT, ESDC Eng, ESDC Tech, PSE,  
SM IEEE

**Testing Performed by:**

dBi Corporation  
216 Hillsboro Avenue  
Lexington, KY 40511-2105, USA

**Testing Performed on:** July 29 & 31, 2007 **at:**

Lexmark International, Inc.  
Development Lab.  
Lexington, KY 40550, USA

**Reviewed and Approved by:** John R. Barnes KS4GL, PE, NCE, NCT, ESDC Eng, ESDC Tech,  
PSE, SM IEEE

|--------------------------------------------------------|
| <b>INFORMATION RELATING TO PRODUCT RF INTERFERENCE</b> |
|--------------------------------------------------------|

**Appliance/Product:** IR field disturbance counter

**Model/Type Number:** FDEZIO

**FCC ID:** M5ZFDEZIO

**Rating:** 3.6Vdc (Lithium battery)

**Suppression Components:** none

**Clock Frequencies:** 8MHz and 418MHz

**Cables:** none.

**Electronic Printed Circuit Boards:**

IR-CTR-DIRECTIONAL-418

P/N P2792

**Size of Product:** 64mm x 51mm x 25mm high

**Weight of Product:** 70g

## **Radiated Emissions 30-4,180 MHz**

### **Radiated Emission Standards:**

FCC 47 CFR Part 15-2006, using ANSI C63.4-2003; section 15.231(e) limits for 418MHz.

**Appliance/Product:** IR field disturbance counter

**Model/Type Number:** FDEZIO

**FCC ID:** M5ZFDEZIO

**Rating:** 3.6Vdc (Lithium battery)

**Serial Number:** 70767010

**Host and Other Peripherals:** None

**Name of Test:** Radiated Interference

**Test Procedure:** ANSI C63.4-2003

**Test Location:** 5m semianechoic chamber

**Test Distance:** 3m

**Test Instrumentation:** See attached sheets

**Notes:** Transmitting at 1 second intervals to speed up testing.

Based on our experiences testing previous FCC Part 15.231(e) products, we put a calibrated 20dB attenuator right after the bi-con antenna to prevent signal compression in the preamp/receiver chain. for measurements from 30-1000MHz. We added its loss (20.194dB at 418MHz, 20.15dB at 836MHz) to the field strengths measured by the receiver in this band. We used a different antenna and preamp for measurements above 1GHz. The FCC Part 15.231(e) limits above 1GHz are lower than the FCC Class A limits above 1GHz, thus any linearity concerns had been addressed during equipment calibration.

Due to software limitations, we had to measure PK+, QP, and AVE for 418MHz and its harmonics in manual mode, as follows:

1. With the equipment-under-test (EUT) upright, measure 418MHz and 836MHz in QP mode with the bi-con antenna vertical and horizontal (Lexmark's EMC software records the azimuth and antenna elevation for the highest QP emissions).
2. Repeat step 1 with the EUT on its back.
3. Repeat step 1 with the EUT on its side.
4. Study the plots to determine which orientation of the EUT had the highest emissions in QP mode.
5. Return the EUT to this position. With the bi-con antenna vertical, go back to the azimuth and antenna elevation that maximized the QP emissions at a given frequency.
6. Using a 1 second sampling time, measure PK+ and QP, taking the maximum values seen on the receiver over 10-20 seconds. If we still suspected signal compression, we increased the attenuation of the receiver's front-end by 10dB. If the measurement stayed the same, we used the previous reading. If the value increased, we continued increasing the attenuation in 10dB steps until the measurement stayed the same, then reduced the attenuation 10dB for the official measurement.

7. Using a 100 millisecond sampling time, measure AVE, taking the maximum value seen on the receiver over 10-20 seconds. (Since we could only catch the top 2 digits, we used 0.99dB as the fractional part to be conservative.)
8. In the calculations, add the attenuator's loss to the measured value to get the true field strength.
9. Repeat steps 5 to 8 with the bi-con antenna horizontal.
10. Put the EUT(s) on the table in the position(s) that maximized 418MHz Radiated Emissions.
11. Measure 1254MHz, 1672MHz, ..., 4180MHz in PK+ mode with the horn antenna vertical and horizontal (the software records the azimuth of the PK+ and AVE peaks, elevation was 1m).
12. With the horn antenna vertical, go to the azimuth that maximized each PK+ peak.
13. Using a 1 second sampling time, measure PK+, taking the maximum values seen on the receiver over 10-20 seconds.
14. Using a 100 millisecond sampling time, measure AVE, taking the maximum value seen on the receiver over 10-20 seconds. (Since we could only catch the top 2 digits, we used 0.99dB as the fractional part to be conservative.)
15. Repeat steps 12 to 14 with the horn antenna horizontal.

For measurements from 30MHz-1,000 MHz the 6dB resolution bandwidth (RBW) was 120kHz. Above 1,000MHz the 6dB RBW was 1MHz. All measurements were made in EMI Receiver mode, and according to the receiver specifications: video bandwidth (VBW) doesn't apply, the bandwidth error is under 10%, and the shape factor (B(60dB)/B(6dB)) is under 10.

Under Section 15.231(e), the average limit for the fundamental is calculated by linear interpolation from 1500uV/m at 260MHz to 5000uV/m at 470MHz when measured at 3m. Average limit =  $((5000\text{uV/m} - 1500\text{uV/m}) * (418\text{MHz} - 260\text{MHz}) / (470\text{MHz} - 260\text{MHz})) + 1500\text{uV/m} = 4133\text{uV/m}$  =  $20 * \log(4133) \text{ dB(uV/m)} = 72.33\text{dB(uV/m)}$ . Section 15.35(b) sets the peak limit for the fundamental to 20 dB above the average limit, or 92.33dB(uV/m) at 3m. For spurious emissions, Section 15.231(e) sets the average limit to 20dB below the maximum permitted fundamental level, or 52.33dB(uV/m) at 3m, with the peak limit 20dB higher at 72.33dB(uV/m).

The maximum transmit time for this sensor is 8ms. Averaged over a 100ms sample time, the AVE measurement should be about  $20 * \log(8\text{ms}/100\text{ms}) = -21.938\text{dB}$  from PK+ measurements. The measured difference may be less if the AVE signal level is below the noise floor of the receiver, artificially increasing its value. On a previous product we were told that for pulsed emissions we should calculate AVE emissions using a duty-cycle correction factor =  $20 * \log(\text{worst case ON-TIME (ms) in any 100ms window} / 100 \text{ ms})$  from the peak value, with the duty-cycle correction factor limited to the range 0dB to 20dB. In this test report we show both the *measured* AVE values and the *calculated* AVE values for this sensor.

**Test Results:** Tables 1 through 4, and the Transmitted Bandwidth Data, show that this unit meets the radiated interference requirements of FCC Part 15 Section 15.231(e).

## Transmitted Bandwidth Data

**Appliance/Product:** IR field disturbance counter

**Model/Type Number:** FDEZIO

**FCC ID:** M5ZFDEZIO

**Rating:** 3.6Vdc (Lithium battery)

**Serial Number:** 70767010

**Test Results:** The 20dB transmitted bandwidth of the FDEZIO is 371kHz (417.895MHz to 418.266MHz), well within the 1045kHz (0.25% of 418MHz) maximum bandwidth permitted by FCC Part 15 Section 15.231(c). In the photo, each horizontal division is 500kHz, and each vertical division is 10dB. The RBW bandwidth was 100kHz, and the VBW bandwidth was 300kHz, with a sweep time of 5ms.

**PROCEDURE:** Test Performed Per ANSI 63.4 – 2003.

*John R. Barnes*

Signed \_\_\_\_\_ Date August 8, 2007

John R. Barnes, PRESIDENT dBi Corporation

**Conducted Emissions 150 kHz-30 MHz**

**Conducted Emission Standards:**

FCC 47 CFR Part 15-2005, using ANSI C63.4-2003

**Appliance/Product:** IR field disturbance counter

**Model/Type Number:** FDEZIO

**FCC ID:** M5ZFDEZIO

**Rating:** 3.6Vdc (Lithium battery)

**Serial Number:** 70767010

**Host and Other Peripherals:** None

**Name of Test:** Powerline Conducted Interference

**Test Procedure:** ANSI C63.4-2003

**Test Location:** All welded 18 ft x 18 ft shielded enclosure, Lexmark test facility, located in  
Lexington, Kentucky

**Test Instrumentation:** See attached sheets

**Note:** none

**Test Results:** This unit gets power from an internal battery, and has no connection to AC power lines.  
Therefore it meets the Class B conducted interference requirements of FCC Part 15 without  
testing.

**Calibration:** The measuring equipment used at Lexmark is calibrated according to the instruction manual once a day. Once a week the accuracy of the test system is checked. This includes the test equipment, associated cables, and antennas. This is accomplished with a calibrated radiating source for the radiated measurements, and a synthesized signal generator for the conducted measurements.
