FCC ID: M74TX9560

Product Name: TX-9560MT and TX-9560EZ

Attn: Director of Certification

Explanation of Dual Model Transmitters.

Transmitter model numbers TX-9560MT and TX-9560EZ use a single PCB with identical components, identical plastic cases, batteries, antennas and Tuning and Testing procedures. The difference between the two transmitter models is seen in the figures below. Figure 1 is the TX-9560EZ keypad which allows a user to page up to 20 different pagers sending a one single message with one button press. Figure 2 is the TX-9560MT which allows a user to select up to 9 different pagers and select up to 6 different messages with 2 button presses. One button press for the pager number and one button press to select a desired message.

Offering two keypads for the same transmitter gives our customers a choice in how they prefer to implement they're paging application.

Regards,

A handwritten signature in black ink that reads "Mike Williams". The signature is written in a cursive, flowing style.

Mike Williams
LRS Engineer
