**SAR evaluation Letter for Sagem A2005sca+  
FCC id: M9HA5SCPE2**

I have reviewed performed the SAR Evaluation and find it meets the requirements.

This product is a dual band GSM Handset which supports both GSM and GPRS.

The highest reported SAR was 1.247 W/kg Head SAR at 1850.2 MHz. The highest reported Body SAR with 1.5 cms separation was 0.670 W/kg Head SAR at 824.2 MHz.  
The highest reported Head SAR at 850 MHz was 1.224 W/kg at 848.8 MHz.  
The highest reported Body SAR at 1900 MHz with 1.5 cms separation was 0.286 W/kg.

I attended the May 2003 FCC Workshop and have used the FCC provided checklist for the SAR evaluation.

Please note:

1: Accessories

There were no belt clips/holsters or similar listed in the User Manual; neither was there any alternate battery option.

The Body SAR was tested with the Handsfree kit in place.

Yours sincerely
