Product Description

The EUT is a low power 125 kHz transmitter.

RF Ideas offers the pcPROXAl00 as a computer access control and logon capability for existing AWID badge users. The pcPROX system will free the user from entering passwords and increase security. As the user approaches their PC, the pcPROXA100 detects the user's AWID badge, granting immediate access. If the PC user walks away, the system detects this event and is automatically secured and enters into a screensaver mode. When an unauthorized person attempts to use the PC, access is denied.

The EUT will only be marketed to corporations. It works in conjunction with security systems in offices and factories.
