Federal Communications Commission  
FCC Laboratory  
Columbia, MD

Dear Mr. or Ms.,

RF Ideas Inc. has integrated the electronics board portion of the HID Corporation 6005/8A ProxPoint proximity reader into their product, which has been submitted to you for Part 15 Intentional Radiator Certification.

The 6005/8A ProxPoint has FCC Certification under ID No. JQ660XX. The board level reader HID will be selling to RF Ideas is called the 4065/8A ProxPoint OEM Module. The electronics board for both readers are identical. RF Ideas has developed their own antenna, which is remote from the electronics board.

Because we desire to keep certain documentation for the 6005/8A ProxPoint confidential and not reveal it to RF Ideas, we are submitting it directly to you. Needless to say, the RF Ideas application needs to be confidential also.

In addition to this letter we are sending you, electronically, the 6005/8A schematic (pdf files 6005-401sh1 and 6005-401sh2) and transmitter block diagram (Word file Block diag). Also being sent is the 6005/8A technical report (Word file ProxPoint FCC), which contains confidentiality request, description of circuit functions, how the device operates, and ground system.

Regards,

Frank de Vall
