

OPERATIONAL DESCRIPTION

Equipment Tested (Company, Model)

RF IDEas, BSE-PCPROXH-USB

FCC ID:

M9MPCPROXHUSB100

The EUT is a low power, 125 kHz transmitter.

RF IDEas offers the pcPROXH-USB as a computer access control, logon capability, and identification means for existing HID badge holders. The pcPROX frees the user from entering passwords and ID codes. When the user presents their badge to the pcProxh-USB reader, it detects the user's badge and sends the badge information to the computer. This information can be used for logon, audit, and identification or for various other utility functions.

The EUT will only be marketed to corporations. It works in conjunction with security systems in offices and factories.
