

RF IDEas, Inc.

FCC ID: M9MRFID1356I150

Product Description

The EUT is a low power 13.56Mhz transmitter. The EUT is used to send the contactless card data to a USB or Serial port for identification of user. The EUT frees the user from entering identifying information manually and increases efficiency and security. The user presents the badge to the EUT when they approach their PC, or other equipment with the EUT attached, and the EUT detects the user's contactless badge sending the badge information to a receiving application. The EUT will be marketed to corporations. It works in conjunction with systems throughout offices environments and factories. Common uses of the EUT are:

Computer Logon
Manufacturing floor
Time and Attendance
Point of Sale
Badge Enrollment
Document Auditing
Single Sign On
Healthcare HIPAA Compliance
Machine Control
