

American Telecommunications Certification Body Inc.  
6731 Whittier Ave, McLean, VA 22101

December 20, 2007

RE: MiTAC Technology Corp.

FCC ID: MAU8212A

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

1. The manual needs to clearly state that this is a DFS client only and do not support ad-hoc mode or peer-to-peer mode.
2. Operating frequency should be 5180MHz ~5320 MHz and 5500 to 5700MHz.  
at page 5. Please correct.
3. FCC ID shown on the label is out of focus. Please provide a better one.
4. Internal photos shows Bluetooth and 3G antenna on the display channel, which are not supported by this device. Please remove them from this device.
5. DFS test report: Please follow the FCC new requirement on the following testing:
  - Channel Move Time: < 10 sec.
  - Bin 6 (Long Pulse) –sweep approximately 22 secPlease note that sweep 22 sec on the page 20 of the test report should be for Radar type 6, but not Radar type 5.

Best regards,

~~~~~

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
