1) Submit a DFS test report with data for the 20MHz mode.

REPLY:

The bandwidth for 802.11a mode is 20MHz as same as 802.11n20 mode, so 802.11a(20MHz bandwidth) and 802.11n40(40MHz bandwidth) were tested for the DFS test report instead of all three modes.

That means, You can see the data of 802.11a mode from the existing DFS test report for the 20MHz mode.

Do we need to add a notice to the existing DFS test report to state that the bandwidth for both 802.11a and 802.11n20 mode are 20MHz?
