RE: Ambit Microsystems Corporation

FCC ID: MCLT60H656

I have a few comments on the above referenced Application.

- 1) For permissive change applications, the conducted power is expected to be within 0.5 dB of the original conducted power. It appears that the conducted power in this application is 1.0 dBm below the original power. Please recheck the power measurements, software settings, etc. to ensure proper output levels. If necessary, please retest the spurious emissions.
- 2) Please adjust the RF exposure exhibit to match the power measured in 1).

Timothy R. Johnson  
Examining Engineer
