

## **DFS TEST REPORT**

Report No.: RF141225E06-5

| FCC | ıח          | MCLT77H566 |
|-----|-------------|------------|
| гсс | <b>Ι</b> D: |            |

Test Model: T77H566

- Received Date: Dec. 24, 2014
  - Test Date: Jan. 26, 2015
  - Issued Date: Feb. 10, 2015
    - Applicant: HON HAI PRECISION IND.CO.,LTD
    - Address: 5F-1,5 Hsin-An Road Hsinchu, Science-Based Industrial Park Taiwan, R.O.C.
  - **Issued By:** Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch Hsin Chu Laboratory
  - Lab Address: No. 81-1, Lu Liao Keng, 9th Ling,Wu Lung Tsuen, Chiung Lin Hsiang, Hsin Chu Hsien 307, Taiwan R.O.C.

This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents. Unless specific mention, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification. The report must not be used by the client to claim product certification, approval, or endorsement by TAF or any government agencies.

#### 1. CERTIFICATION

| Product:       | WiFi/BT Module   |
|----------------|--|
| Brand:         | FOXCONN  |
| Test Model:    | T77H566  |
| Sample Status: | ENGINEERING SAMPLE   |
| Applicant:     | HON HAI PRECISION IND.CO.,LTD                                  |
| Test Date:     | Jan 26, 2015   |
| Standards:     | FCC Part 15, Subpart E (Section 15.407)                        |
|                | KDB 905462 D02 UNII DFS Compliance Procedures New Rules v01r01 |

The above equipment has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

| Frequency Band(MHz) | Output     | Output    |  |
|                     | Power(dBm) | Power(mW) |  |
| 5250~5350MHz        | 27.80      | 601.975   |  |
| 5470~5725MHz        | 27.19      | 523.651   |  |

### IEEE 802.11ac (VHT40)

|                     | MAX. Power |           |  |  |
|---------------------|------------|-----------|--|--|
| Frequency Band(MHz) | Output     | Output    |  |  |
|                     | Power(dBm) | Power(mW) |  |  |
| 5250~5350MHz        | 27.68      | 586.185   |  |  |
| 5470~5725MHz        | 27.04      | 505.293   |  |  |

#### IEEE 802.11ac (VHT80)

|                     | MAX. Power |           |  |  |
|---------------------|------------|-----------|--|--|
| Frequency Band(MHz) | Output     | Output    |  |  |
|                     | Power(dBm) | Power(mW) |  |  |
| 5250~5350MHz        | 23.15      | 206.562   |  |  |
| 5470~5725MHz        | 26.14      | 410.710   |  |  |

#### 2.6 TRANSMIT POWER CONTROL (TPC)

U-NII devices operating in the 5.25-5.35 GHz band and the 5.47-5.725 GHz band shall employ a TPC mechanism. The U-NII device is required to have the capability to operate at least 6 dB below the mean EIRP value of 30 dBm. A TPC mechanism is not required for systems with an EIRP of less than 500 mW.

Maximum EIRP of this device is 601.975mW which more than 500mW, therefore it's require TPC function.

TPC is auto controlled by software to adjust power level when the TX power needs to increase or decrease. So it is automatic TPC.

#### 2.7 STATEMENT OF MAUNFACTURER

This device (Client) is without radar detection, then the manufacturer statement confirming that information regarding the parameters of the detected Radar Waveforms is not available to the end user. And the device doesn't have Ad Hoc mode on DFS frequency band.

#### 3. U-NII DFS RULE REQUIREMENTS

#### 3.1 WORKING MODES AND REQUIRED TEST ITEMS

The manufacturer shall state whether the UUT is capable of operating as a Master and/or a Client. If the UUT is capable of operating in more than one operating mode then each operating mode shall be tested separately. See tables 6 and 7 for the applicability of DFS requirements for each of the operational modes.

#### TABLE 6: APPLICABILITY OF DFS REQUIREMENTS PRIOR TO USE A CHANNEL

|                                 | Operational Mode |                                   |                             |  |
|---------------------------------|------------------|-----------------------------------|-----------------------------|--|
| Requirement                     | Master           | Client without radar<br>detection | Client with radar detection |  |
| Non-Occupancy Period            | $\checkmark$     | Not required                      | $\checkmark$                |  |
| DFS Detection Threshold         | $\checkmark$     | Not required                      | $\checkmark$                |  |
| Channel Availability Check Time | $\checkmark$     | Not required                      | Not required                |  |
| U-NII Detection Bandwidth       | $\checkmark$     | Not required                      | $\checkmark$                |  |

#### TABLE 7: APPLICABILITY OF DFS REQUIREMENTS DURING NORMAL OPERATION

|                                   | Operational Mode                         |                                   |  |  |
|-----------------------------------|--|-----------------------------------|--|--|
| Requirement                       | Master or Client with<br>radar detection | Client without radar<br>detection |  |  |
| DFS Detection Threshold           | ✓  | Not required                      |  |  |
| Channel Closing Transmission Time | $\checkmark$                             | $\checkmark$                      |  |  |
| Channel Move Time                 | ✓  | $\checkmark$                      |  |  |
| U-NII Detection Bandwidth         | $\checkmark$                             | Not required                      |  |  |

| Additional requirements for devices with multiple bandwidth modes | Master or Client with radar detection | Client without radar<br>detection                    |  |
|---|---------------------------------------|--|--|
| U-NII Detection Bandwidth and<br>Statistical Performance Check    | All BW modes must be tested           | Not required   |  |
| Channel Move Time and Channel<br>Closing Transmission Time        | Test using widest BW mode available   | Test using the widest BW mode available for the link |  |
| All other tests   | Any single BW mode                    | Not required   |  |

Note: Frequencies selected for statistical performance check (Section 7.8.4) should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection bandwidth. For 802.11 devices it is suggested to select frequencies in all 20 MHz channel blocks and a null frequencies between the bonded 20 MHz channel blocks.

#### 3.2 TEST LIMITS AND RADAR SIGNAL PARAMETERS

#### **DETECTION THRESHOLD VALUES**

#### TABLE 8: DFS DETECTION THRESHOLDS FOR MASTER DEVICES AND CLIENT DEVICES WITH RADAR DETECTION

| Maximum Transmit Power  | Value<br>(See Notes 1, 2, and 3) |
|---|----------------------------------|
| EIRP ≥ 200 milliwatt  | -64 dBm                          |
| EIRP < 200 milliwatt and<br>power spectral density < 10 dBm/MHz                 | -62 dBm                          |
| EIRP < 200 milliwatt that do not meet the<br>power spectral density requirement | -64 dBm                          |

Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna.

Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

Note3: EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911 D01.

#### TABLE 9: DFS RESPONSE REQUIREMENT VALUES

| Parameter                         | Value  |
|-----------------------------------|--|
| Non-occupancy period              | Minimum 30 minutes   |
| Channel Availability Check Time   | 60 seconds   |
| Channel Move Time                 | 10 seconds   |
|                                   | See Note 1.  |
| Channel Closing Transmission Time | 200 milliseconds + an aggregate of 60                                  |
|                                   | milliseconds over remaining 10 second period.                          |
|                                   | See Notes 1 and 2.   |
| U-NII Detection Bandwidth         | Minimum 100% of the U-NII 99% transmission power bandwidth. See Note 3 |

Note 1: Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst. Note 2: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.

Note 3: During the U-NII Detection Bandwidth detection test, radar type 0 should be used. For each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.

#### PARAMETERS OF DFS TEST SIGNALS

Step intervals of 0.1 microsecond for Pulse Width, 1 microsecond for PRI, 1 MHz for chirp width and 1 for the number of pulses will be utilized for the random determination of specific test waveforms.

| Radar<br>Type | Pulse Width<br>(µsec)  | PRI<br>(µsec)   | Number<br>of Pulses  | Minimum<br>Percentage of<br>Successful<br>Detection | Minimum<br>Number of<br>Trials |  |  |  |  |
|---------------|--|---|--|---|--------------------------------|--|--|--|--|
| 0             | 1  | 1428  | 18   | See Note 1  | See Note 1                     |  |  |  |  |
| 1             | 1  | Test A: 15 unique<br>PRI values<br>randomly selected<br>from the list of 23<br>PRI values in<br>Table 5a<br>Test B: 15 unique<br>PRI values<br>randomly selected<br>within the range<br>of 518-3066<br>$\mu$ sec, with a<br>minimum<br>increment of 1<br>$\mu$ sec,<br>excluding PRI<br>values<br>selected in<br>Test A | $\operatorname{Roundup}\left\{ \begin{pmatrix} \frac{1}{360} \end{pmatrix} \right\}$ | 60%   | 30                             |  |  |  |  |
| 2             | 1-5  | 150-230   | 23-29  | 60%   | 30                             |  |  |  |  |
| 3             | 6-10   | 200-500   | 16-18  | 60%   | 30                             |  |  |  |  |
| 4             | 4 11-20 200-500  |   | 12-16  | 60%   | 30                             |  |  |  |  |
|               | Aggree   | gate (Radar Types 1-4)  |  | 80%   | 120                            |  |  |  |  |
|               | Note 1: Short Pulse Radar Type 0 should be used for the detection bandwidth test, channel move time, and channel closing time tests. |   |  |   |                                |  |  |  |  |

#### 5. TEST PROCEDURE

#### 5.1 DFS MEASUREMENT SYSTEM:

A complete DFS Measurement System consists of Radar signal generate system to generating the radar waveforms in Table 10, 11 and 12. The traffic monitoring system is specified to the type of unit under test (UUT).

#### Conducted setup configuration of DFS Measurement System

#### **Channel Loading**

System testing will be performed with channel-loading using means appropriate to the data types that are used by the unlicensed device. The following requirements apply:

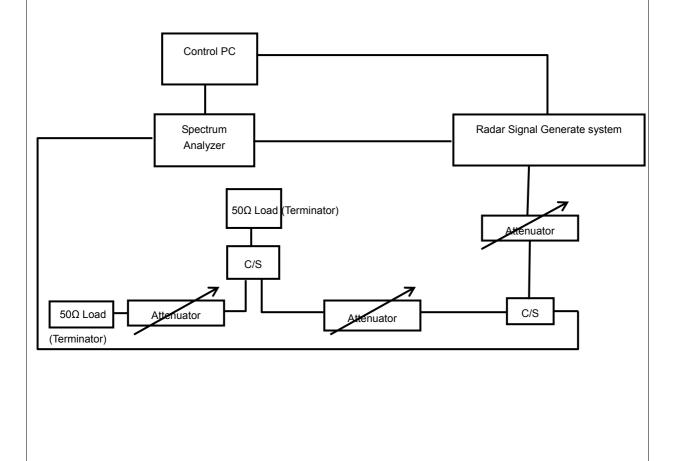

| a) | The data file must be of a type that is typical for the device (i.e., MPEG-2, MPEG-4, WAV, MP3, MP4, AVI, etc.) and must generally be transmitting in a streaming mode. |              |
|----|---|--------------|
| b) | Software to ping the client is permitted to simulate data transfer but must have random ping intervals.   |              |
| C) | Timing plots are required with calculations demonstrating a minimum channel loading of approximately 17% or greater.  | $\checkmark$ |
| d) | Unicast or Multicast protocols are preferable but other protocols may be used. The appropriate protocol used must be described in the test procedures.                  |              |

#### 5.2 CALIBRATION OF DFS DETECTION THRESHOLD LEVEL:

The measured channel is 5500 MHz in 20MHz Bandwidth, 5510MHz in 40MHz Bandwidth and 5530MHz in 80MHz Bandwidth. The radar signal was the same as transmitted channels, and injected into the antenna port of AP (master) or Client Device with Radar Detection, measured the channel closing transmission time and channel move time. The Master antenna gain is 3.428dBi and required detection threshold is -59.572dBm (= -64 +1 +3.428). The calibrated conducted detection threshold level is set to -59.572 dBm.

# CONDUCTED SETUP CONFIGURATION OF CALIBRATION OF DFS DETECTION THRESHOLD LEVEL

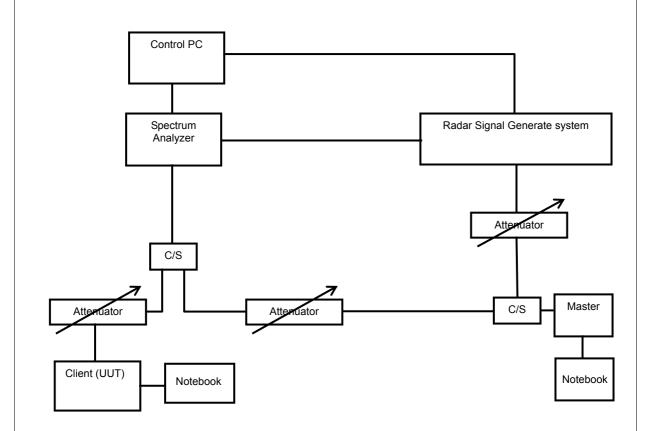

#### 5.3 DEVIATION FROM TEST STANDARD

No deviation.

#### 5.4 CONDUCTED TEST SETUP CONFIGURATION

#### 5.4.1 CLIENT WITHOUT RADAR DETECTION MODE

The UUT is a U-NII Device operating in Client mode without radar detection. The radar test signals are injected into the Master Device.

#### 6. TEST RESULTS

#### 6.1 SUMMARY OF TEST RESULTS

| CLAUSE | TEST PARAMETER                    | REMARKS        | PASS/FAIL |
|--------|-----------------------------------|----------------|-----------|
| 15.407 | DFS Detection Threshold           | Not Applicable | NA        |
| 15.407 | Channel Availability Check Time   | Not Applicable | NA        |
| 15.407 | Channel Move Time                 | Applicable     | Pass      |
| 15.407 | Channel Closing Transmission Time | Applicable     | Pass      |
| 15.407 | Non- Occupancy Period             | Applicable     | Pass      |
| 15.407 | U-NII Detection Bandwidth         | Not Applicable | NA        |
| 15.407 | Non-associated test               | Applicable     | Pass      |
| 15.407 | Non-Co-Channel test               | Applicable     | Pass      |

#### 6.2 DETAILED TEST RESULTS

#### 6.2.1 TEST MODE: DEVICE OPERATING IN CLIENT WITHOUT RADAR DETECTION MODE.

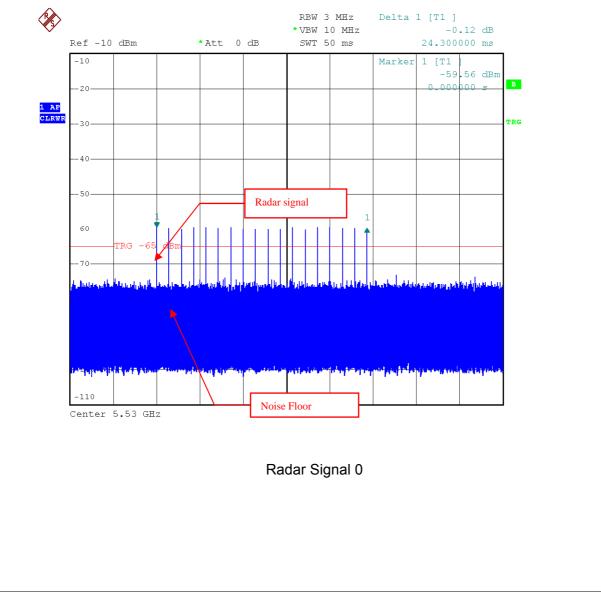

The radar test signals are injected into the Master Device.

This test was investigated for different bandwidth (20MHz < 40MHz and 80MHz). The following plots was done on 80MHz as a representative

#### 6.2.1.1 DFS DETECTION THRESHOLD

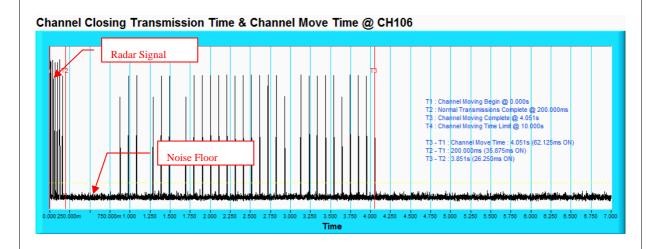

.

The required detection threshold is -59.572dBm (= -64 + 3.428 + 1). The conducted radar burst level is set to -59.572dBm.

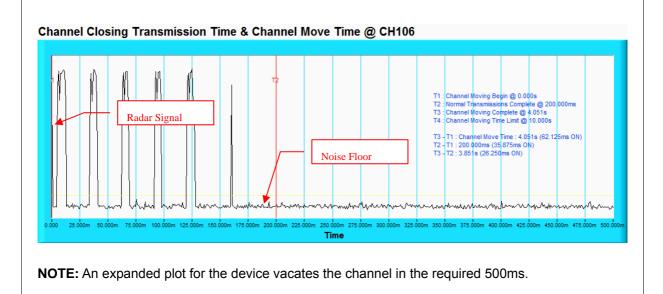

#### 6.2.1.2 CHANNEL CLOSING TRANSMISSION AND CHANNEL MOVE TIME

**NOTE:** T1 denotes the start of Channel Move Time upon the end of the last Radar burst. T2 denotes the data transmission time of 200ms from T1. T4 denotes the 10 second from T1 to observe the aggregate duration of transmissions.

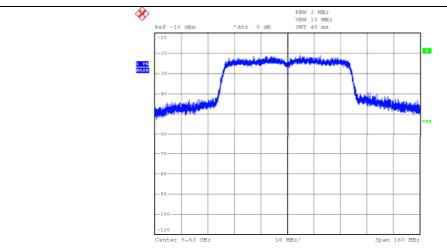

#### Report No.: RF141225E06-5

#### 6.2.1.3 NON- OCCUPANCY PERIOD

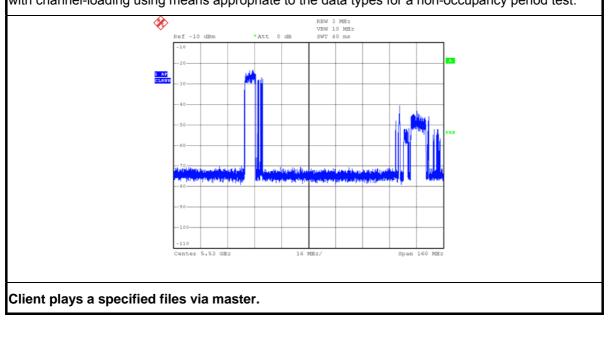

#### ASSOCIATED TEST

1) Test results demonstrating an associated client link is established with the master on a test frequency.

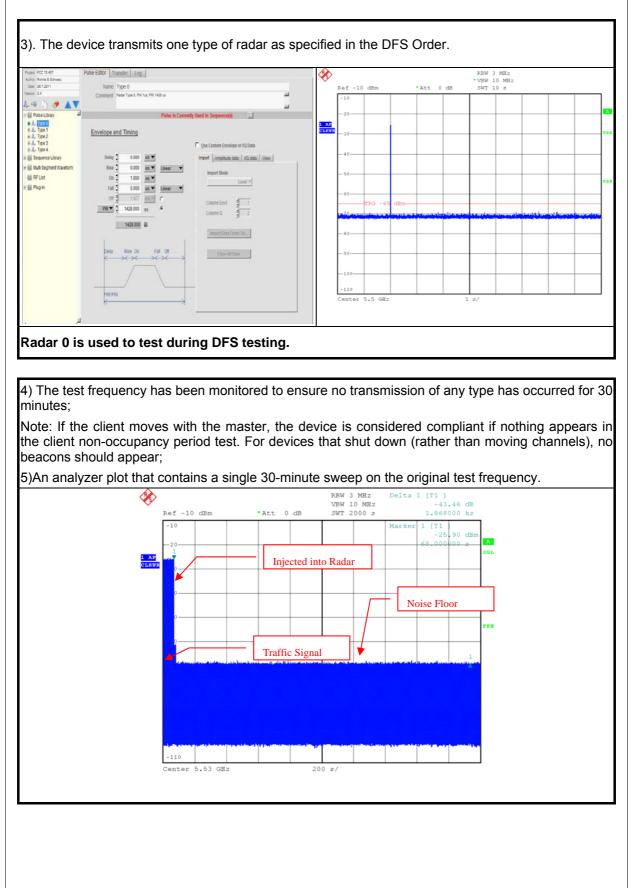

#### EUT (Client ) links with master on 5530MHz

The master and DFS-certified client device are associated, and system testing will be performed with channel-loading using means appropriate to the data types for a non-occupancy period test.

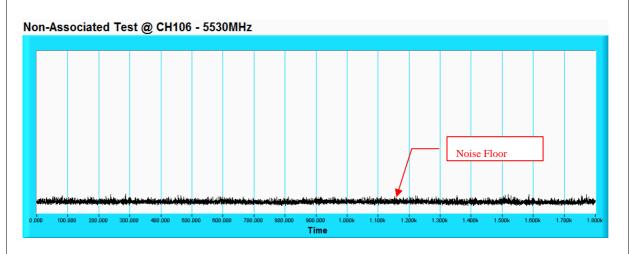

#### 6.2.1.4 NON-ASSOCIATED TEST

Master was off.

During the 30 minutes observation time, The UUT did not make any transmissions in the DFS band after UUT power up.

#### 6.2.1.5 NON- CO-CHANNEL TEST

The UUT was investigated after radar was detected the channel and made sure no co-channel operation with radars.

#### 7. INFORMATION ON THE TESTING LABORATORIES

We, Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, were founded in 1988 to provide our best service in EMC, Radio, Telecom and Safety consultation. Our laboratories are accredited and approved according to ISO/IEC 17025.

If you have any comments, please feel free to contact us at the following:
