Hi Chris,

Attached please find corrected test report, MPE exhibit, and tune-up procedures per manufacturer's email. As we discussed tune-up procedures are pretty much n/a for most of the devices you and I will see.

BTW I've copied Francie Miller on this because she is working directly with client regarding documentation preparation and other issues.

If you have further questions or need additional info please let me know. Also, once you update website to issue grant, what is the typical turn-around time?

best regards

Tom

Tom, I have performed the review of the above referenced TCB application and have the following items that need to be addressed before the review can be completed:

1. Page 2 of the test report has a typo in the indication of power (51.42 Watts listed instead of the 1.42 Watts that should be listed).
2. Please update the MPE exhibit to include the collocated Bluetooth transmitter in the calculations.
3. Please provide a tune-up procedure exhibit for this device.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.

Best regards,

Chris Harvey
