MG3-3050-1	1) The test report only has data for the 2.4 GHz operation, however the FCC notice information provides information regarding the 5 GHz band. Please explain why the FCC notice information describes operation in the 5 GHz band and provide additional information if necessary. Response: Intel has confirmed back to us (UEI) that the reference of 5 GHz is not in reference to the remote, but something else within the overall product bundle.
