

Addendum to MPE Estimate

The EUT will be used in a handheld position. As such, the RF Exposure condition will be handheld portable. There are no provisions for body-worn operation. It does not have any body worn accessories such as lanyards, beltclips or holsters, nor does it have a QWERTY keyboard for laptop use. It would not be kept in a coat pocket. Thus, a MPE Estimate is an appropriate way to demonstrate RF exposure compliance.
