

FCC LABEL LOCATION: FCCID:MHALVP916

Pursuant to Section 2.925(e) of the Federal Communications Commission's ("FCC's") rules, we are writing to request that the FCC approve an alternate method of labeling equipment subject to the equipment certification process. Data Sciences International, Inc. ("DSI") is preparing an application for certification of a low powered transmitter under Part 15 of the rules. Because the transmitter is for use only as a device implanted into laboratory research animals, we request that the FCC name plate (with the FCC identification number) be included in the accompanying user manual rather than on the device itself. The device is not intended to operate outside of the body in free space.
