Gentlemen:

As agent for Data Sciences International, TRP Inc. is herewith submitting an application for certification of a Low Power Transmitter operating in the 902 – 928 MHz band. These devices are small; have a very low power output generating a low-level electromagnetic field that typically communicates with associated implant receivers over a range of a few meters. It is external the cage holding animals used for scientific research purposes providing a telemetry output of various biophysical parameters such as blood pressure, temperature, heart rate, etc to a data collection system. As such its use is limited to laboratory environments and medical research facilities with a minimal expected proliferation of only a few thousand units at most.

Sincerely yours,

Phillip Inglis
TRP Inc.
