

Reasons for Permissive Change - 81196

This submittal is a Permissive Change II for the FCC only to extend the frequency range. The original submittal for MI7-IPB800 was approved 10/29/03.

No circuit or active component modifications were made on B-800-25 for this permissive change. Only firmware changes to add the additional frequencies were made. Retesting in report FC03-062B was necessary due to different emission masks requirements in the 821 to 824 frequency bands.
