

## Response to E05-000356-1

1. The power consumption of the output device is 7 Amps @12.5V typical.
2. Additional external photos have been uploaded.
3. & 4. The audio is referred to audio frequency only and there is no direct voice transmission, We are however, sending voice over IP. In this mode we meet 1 voice channel in 6.25 kHz bandwidth.
5. This device is not identified under 47 CFR §2.1091 and therefore is categorically excluded from any radio-frequency radiation exposure evaluation.

**Note: The customer wants to proceed with the FCC submittal without waiting for the Canadian submittal to be completed.**
