Re: Application for Class II Permissive Change - FCC ID: MIJCM350V

Dear Sir/Madam:

General Dynamics C4 Systems is submitting this Class II Permissive Change request for the CM-350 VDT under FCC ID: MIJCM350V. The initial assessment of the changes to the equipment indicates that the majority of the modifications are minor and can be classified as Class I permissive changes. The follow-up testing of the equipment also confirmed that there was no degradation to the characteristics reported in the original filing for the CM-350 VDT.

However, two (2) of the changes suggested that a Class II filing was required under the Permissive Change Policy, Publication Number 178919. These modifications are listed below:

- 1) Lower operating frequency extension (via software modification only) from 118 MHz to 117.975 MHz (still within ATC frequency band)
- 2) Addition of an Optional Cavity Filter

The applicable test data associated with these changes including the occupied bandwidth measurements, emission masks, and spurious emissions data is provided in the attached test report. Additionally, the entire list of the enhancements incorporated into the CM-350 VDT is provided in the test report.

Please contact me by telephone at (480) 441-3725, by facsimile at (480) 441-3625, or by email at Gil.Estrella@gdc4s.com if there are any questions or if additional information is needed regarding this request.

Sincerely,

/s/ Gil O. Estrella
