GSM2378 DUTY FACTOR ATTESTATION

To whom it may concern;

The firmware of the GSM2378 is designed to allow the user to set a maximum of 1 location or event report every 2 seconds, each report sent over the wireless network takes under 200ms. It is not possible to request the device more frequently than this.

The GSM2378 supports a maximum of 1 transmit timeslot (GPRS Multi-slot class 2) in the GPRS mode of operation, this Multi-slot class is configured in the factory during manufacturing and it is not possible for a user or installer to configure the GSM2378 to use more than 1 transmit time slot.

Sincerely,

Todd Gallagher
