## ***Comparison of Product Variants in the Enabler II-G Family***

This document is designed to describe the following modules:

- **GSM0107** (Tri-Band module, remote SIM)
- **GSM0108** (Quad-Band module, remote SIM)
- **GSM0107-01** (Tri-Band module with on-board SIM)
- **GSM0108-01** (Quad-Band module with on-board SIM)
- **GSM0114** (US Tri-Band, remote SIM)

### **The GSM0107 and GSM0114 versus the GSM0108:**

The GSM0108 Quad-Band GSM/GPRS module is based entirely on the GSM0107 Tri-Band GSM/GPRS module, the only difference being that in the GSM0108 the GSM850 band has been enabled and the RF calibration files have been populated for that band. The GSM0114 has the RF calibration tables disabled for the GSM900 band.

### **The GSM010x versus the GSM010x-01:**

The GSM010x-01 versions of the module are the same as the GSM010x modules apart from the fact that the – 01 versions have been addition of the SIM connector fitted to the GSM module instead of using remote SIM.

### **Summary:**

In all cases the modules run the same software and apart from the difference's outlined above and are of the same hardware.
