

General Description

The GSM3408 is a quad-band (GSM, EGSM, DCS, PCS) wireless sled for a family of Palm's PDAs that is capable of operating in GSM and GPRS.

Internal Circuitry

The power source is derived from an internal Lithium-Ion battery that can be charged using internal circuitry with an external power supply.

The Athena connector establishes serial communications between the PDA and the OEM modem.

The antenna is a quad-band PCB design.
