

GSM5218 Duty Factor Attestation

To whom it may concern:

The firmware of the GSM5218 is designed to allow the user to set a maximum of one location or event report every 1 Minute, each report sent over the wireless network takes under 500ms to transmit, but causes the device to be in a transmitting state on the network for a maximum of 15 seconds. It is not possible to request the device to transmit more frequently than this.

The GSM5218 supports a maximum of 1 transmit timeslot (GPRS Multi-Slot class 8) in the GPRS mode of operation, this Multi-Slot class is configured in the factory during manufacturing and it is not possible for a user or installer to configure the GSM5218 to use more than 1 transmit time slot.

Sincerely,

A handwritten signature in black ink, appearing to read "Rob Holden", with a long horizontal flourish extending to the right.

Rob Holden
