Subject: FCCID: MKDAR447

REFERENCE: EA94026 Correspondence Ref # 7991

This UUT was tested in both the scan and the single frequency modes. In the scan mode the tuned dipole was adjusted to 450MHz and in the single frequency mode it was adjusted for that individual frequency. The data in the test report was the worse case of the 2 sets of measurements.

This receiver only tunes the 430-470MHz band and cannot be easily changed to receive any other band.

BEST REGARDS,

Sid Sanders
