Timco Engineering  
Ms. Sharon Hoffman  
Ref: MMA710110C Permissive Change

We are requesting that Timco prepare a permissive change to this equipment authorization. The original grant specified a frequency range of 40-50 MHz. The permissive change would modify the grant to a frequency range of 39-50 MHz. The radio will remain identical and unchanged in design from the originally submitted radio. There is no change to the hardware of the transceiver. Only software change is required to cause operation on 39-50 MHz.

Please expedite this as much as possible. If you have any questions please let me know.

Best regards,

David Kingsolver  
Director of Engineering  
Midland Radio Corporation
