|---|----------------------------|--|

**1. Applicant**

- Name : Midland Radio Corporation
- Address : 5900 Parretta Drive Kansas City,MO 64120-2134

**2. Test Item**

- Product Name: FRS
- Model Name: T250
- Brand: X-TALKER
- FCC ID: MMAT250

**3. Manufacturer**

- Name : R12 EMS Philadelphia, Inc.
- Address : New Blk 1 Lot 4&5, Calamba Premier International Park, Barangay Batino, Calamba City, Laguna, Philippines

**4. Date of Test :** 2019. 03. 25. ~ 2019. 03. 26.

FCC CFR 47, Part 95  
KDB 888861 D01 Part 95 GMRS FRS v01

**5. Test Method Used :**  
ANSI/TIA-603-E-2016  
ANSI C63.4-2014

**6. Test Result :** Compliance

**7. Note:** None

**Supplementary Information**

The device bearing the brand name and FCC ID specified above has been shown to comply with the applicable technical standards as indicated in the measurement report and was tested in accordance with measurement procedures specified in ANSI/TIA-603-E-2016.

We attest to the accuracy of data and all measurements reported herein were performed by KOSTEC Co., Ltd. and were made under Chief Engineer's supervision. We assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated.  
This test report is not related to KOLAS accreditation.

## 1. GENERAL INFORMATION

### 1.1 Test Facility

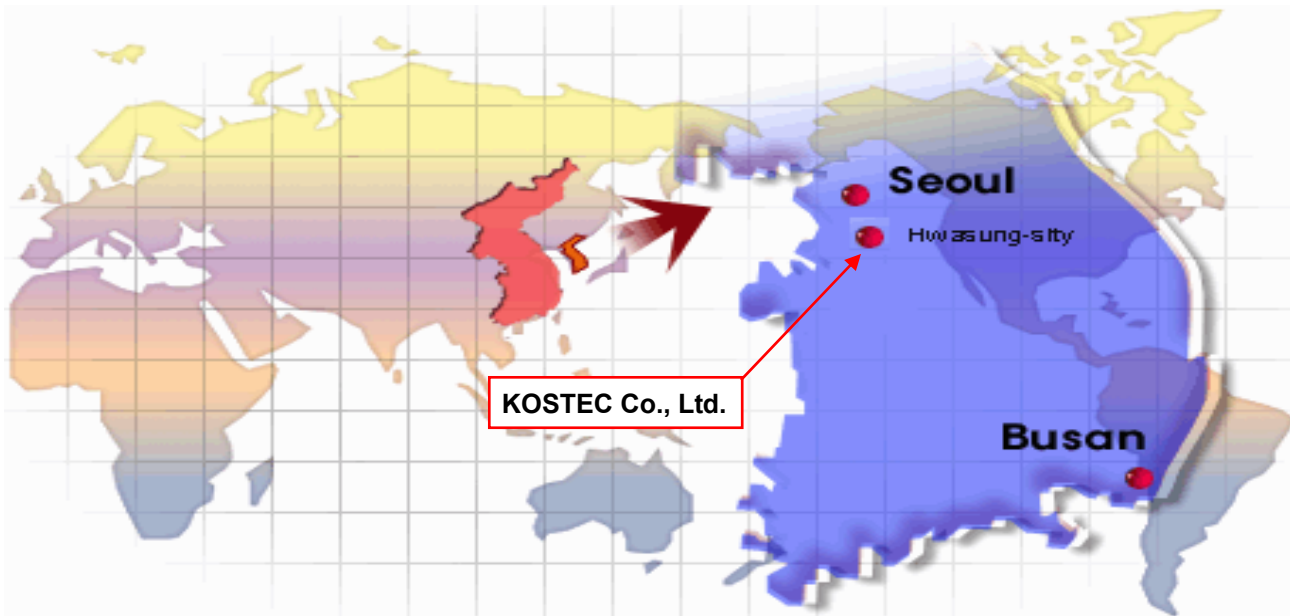

#### Test laboratory and address

KOSTEC Co., Ltd.  
128(175-20,Annyeong-dong)406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea

#### Registration information

KOLAS No. : 232  
FCC/IC Designation No. : KR0041

### 1.2 Location

### 1.3 Revision History of test report

| Rev. | Revisions     | Effect page | Reviewed           | Date          |
|------|---------------|-------------|--------------------|---------------|
| -    | Initial issue | All         | Gyeong Hyeon, Park | 2019. 04. 02. |
|      |               |             |                    |               |

## 2. EQUIPMENT DESCRIPTION

The product specification described herein was declared by manufacturer. And refer to user's manual for the details.

|                                |   |
|--------------------------------|---|
| Equipment Name                 | FRS   |
| Model No                       | T250  |
| Usage                          | FRS held-near-face push-to-talk (PTT) portable device   |
| Intended Operating Environment | General population/Uncontrolled exposure  |
| Serial Number                  | 1   |
| Primary User Functions of EUT  | 2-Way Wireless Voice Communication  |
| Rated output power             | 0.32 W  |
| Max. E.R.P                     | 0.34 W  |
| Operating Frequency Range      | 462.562 5 MHz - 462.712 5 MHz,<br>467.562 5 MHz - 467.712 5 MHz,<br>462.550 0 MHz - 462.725 0 MHz   |
| Channel Number                 | 22 EA   |
| Channel Spacing                | 12.5 kHz  |
| Modulation                     | FM  |
| Occupied Bandwidth (99%)       | 9.96 kHz  |
| Emission Designation           | 11K0F3E   |
| Power Source                   | Ni-MH battery pack / 3.6 VDC nominal / 700 mAh  |
| Antenna Description            | Helical antenna, 0.50 dBi   |
| FCC ID                         | MMAT250   |
| Remark                         | The above DUT's information was declared by manufacturer.<br>Please refer to the specifications or user manual for more detailed description. |

### 3. SYSTEM CONFIGURATION FOR TEST

#### 3.1 Characteristics of equipment

FRS

#### 3.2 Used peripherals list

| Description            | Model No.      | Serial No. | Manufacture               | Remark |
|------------------------|----------------|------------|---------------------------|--------|
| Switching Power Supply | S005CAV0500100 | None       | Midland Radio Corporation | -      |
| Rechargeable Battery   | BATT3R         | None       | Midland Radio Corporation | -      |
| Ear/Mic                | None           | None       | Midland Radio Corporation | -      |
| Desktop Charger        | 18CVP17        | None       | Midland Radio Corporation | -      |

#### 3.3 Product Modification

N/A

#### 3.4 Operating Mode

Constantly transmitting with a carrier at maximum power.

#### 3.5 Test Setup of EUT

### 3.6 Table for Carrier Frequencies

| Channel | Freq. [MHz] | Description          | Channel | Freq. [MHz] | Description          |
|---------|-------------|----------------------|---------|-------------|----------------------|
| 1       | 462.562 5   | 462 MHz Interstitial | 12      | 467.662 5   | 467 MHz Interstitial |
| 2       | 462.587 5   | 462 MHz Interstitial | 13      | 467.687 5   | 467 MHz Interstitial |
| 3       | 462.612 5   | 462 MHz Interstitial | 14      | 467.712 5   | 467 MHz Interstitial |
| 4       | 462.637 5   | 462 MHz Interstitial | 15      | 462.550 0   | 462 MHz New          |
| 5       | 462.662 5   | 462 MHz Interstitial | 16      | 462.575 0   | 462 MHz New          |
| 6       | 462.687 5   | 462 MHz Interstitial | 17      | 462.600 0   | 462 MHz New          |
| 7       | 462.712 5   | 462 MHz Interstitial | 18      | 462.625 0   | 462 MHz New          |
| 8       | 467.562 5   | 467 MHz Interstitial | 19      | 462.650 0   | 462 MHz New          |
| 9       | 467.587 5   | 467 MHz Interstitial | 20      | 462.675 0   | 462 MHz New          |
| 10      | 467.612 5   | 467 MHz Interstitial | 21      | 462.700 0   | 462 MHz New          |
| 11      | 467.637 5   | 467 MHz Interstitial | 22      | 462.725 0   | 462 MHz New          |

According to ANSI C63.26 section 5.1.2.1:

Measurements of transmitters shall be performed and, if required, reported for each frequency band in which the EUT can be operated with the device transmitting at the number of frequencies in each band specified in Table 2.

| Frequency range over which EUT operates | Number of frequencies | Location in frequency range of operation     |
|---|-----------------------|--|
| 1 MHz or less                           | 1                     | Middle                                       |
| 1 MHz to 10 MHz                         | 2                     | 1 near top and 1 near bottom                 |
| More than 10 MHz                        | 3                     | 1 near top, 1 near middle, and 1 near bottom |

| Description          | Frequency Bands [MHz] | Test Channel | Test Frequency [MHz] |
|----------------------|-----------------------|--------------|----------------------|
| 462 MHz Interstitial | 462.562 5~462.712 5   | CH4          | 462.637 5            |
| 467 MHz Interstitial | 467.562 5~467.712 5   | CH11         | 467.637 5            |
| 462 MHz Main         | 462.550 0~462.725 0   | CH19         | 462.650 0            |

### 3.7 Used Test Equipment List

| No. | Instrument                    | Model        | S/N          | Manufacturer               | Due to cal date | Cal interval | used                                |

## 5. MEASUREMENT RESULTS

### 5.1 RF Output Power

#### 5.1.1 Standard Applicable [FCC Part 95.567]

##### FCC Part 95.567

Each FRS transmitter type must be designed such that the effective radiated power (ERP) on channels 8 through 14 does not exceed 0.5 Watts and the ERP on channels 1 through 7 and 15 through 22 does not exceed 2.0 Watts.

#### 5.1.2 Test Environment conditions

- Ambient temperature : (21 ~ 22) °C
- Relative Humidity : (48 ~ 52) % R.H.

#### 5.1.3 Measurement Procedure

The EUT was setup according to ANSI/TIA-603-E-2016 for compliance to FCC 47CFR part 95 requirements.

As a below test procedure (①~⑧), The result value of measurement is performed to condition of the below; The EUT will operate in continuous transmission mode during the time necessary to perform the measured of the frequency. Substitution method was performed to determine the actual  $P_{erp}$ (or  $P_{eirp}$ ) emission levels of the EUT.

The following test procedure as below;

The test is performed in a fully pyramidal chamber to determine the accurate frequencies, after maximum emissions level will be checked on a test chamber and measuring distance is 3 m from EUT to test antenna.

- ① The EUT was set on with continuous transmission mode and placed on a 1.5 meter high non-conductive table on the chamber.
- ② The test antenna is used on Bi-Log antenna at above 30 MHz, and used on Horn antenna at 1 GHz and then the measurements are repeated with the test antenna for vertical and horizontal polarization. The output of the test antenna will be connected to a measuring receiver, and it is set to tuned over the required standard measuring frequency range.
- ③ At each frequency at which a relevant spurious component is detected, the test antenna will be raised and lowered through the specified range of heights until an maximum signal level is detected on the measuring receiver.
- ④ The EUT is position x, y, z axis on rotating through 360 degrees in the horizontal plane, until the Max. signal level is detected by the measuring receiver.
- ⑤ The receiver is scanned from requested measuring frequency band and then the maximum meter reading is recorded. The radiated emissions were measured with requested standard specification (detector and resolution bandwidth etc.)
- ⑥ The EUT was then removed and replaced with substitution antenna .The center of the antenna was approximately at the same location as the center of the EUT, and calibrated for the frequency of the spurious component detected.
- ⑦ Signal generator output port connected with substitution antenna input port. If necessary, may use shield cable between signal generator and substitution antenna
- ⑧ The frequency of the calibrated signal generator is set to frequency of the spurious component detected, and the input attenuator setting of the measuring receiver was adjust in order to increase the sensitivity of the measuring receiver, if necessary

- ⑨ The test antenna was raised and lowered through the specified range of heights to ensure that maximum signal is received.
- ⑩ The input signal to the substitution antenna was be adjusted until an equal or a known related level to that detected from the transmitter is obtained on the measuring receiver.
- ⑪ The input signal to the substitution antenna was be recorded as a power level and corrected for any change of input attenuator setting of the measuring receiver
- ⑫ The measure of  $P_{erp}$ (or  $P_{eirp}$ ) the spurious components is the larger of the two power levels recorded for each spurious component at the input to the substitution antenna, corrected for the gain of the substitution antenna, if necessary.
- ⑬ It is correction to signal generator's offset value. In this case of  $P_{erp}$ (or  $P_{eirp}$ ) shall calculated as follow as formula ;
  - $P_{erp}$ (or  $P_{eirp}$ ) = Signal generator level (dBm) – Cable loss(dB)

### 5.1.5 Test Setup

[ Radiated measurement setup\_Below than 1 GHz]

[ Effective Radiated Power measurement setup]

※ Above the test antenna is used on Horn antenna at above 1 GHz.

### 5.1.5 Measurement Result

| Channel Description  | CH | Frequency [MHz] | Effective Radiated Power |       | Limit [W] | Test Results |
|----------------------|----|-----------------|--------------------------|-------|-----------|--------------|
|                      |    |                 | [dBm]                    | [W]   |           |              |

## 5.2 Modulation Characteristics

### 5.2.1 Standard Applicable [Part 95.575]

#### **Part 95.1775**

Each FRS transmitter type must be designed such that the peak frequency deviation does not exceed 2.5 kHz, and the highest audio frequency contributing substantially to modulation must not exceed 3.125 kHz.

### 5.2.2 Test Environment conditions

- Ambient temperature : (21 ~ 22) °C
- Relative Humidity : (48 ~ 52) % R.H.

### 5.2.3 Measurement Procedure

#### **•Modulation Limit**

The carrier frequency deviation was measured with the tone adjust the audio input for 60 % of rated system deviation at 1 kHz using this level as a reference (0 dB) and vary the input level from -20 to +20 dB. Record the frequency deviation obtained as a function of the input level at frequencies 0.1, 0.5, 1.0, 3.0 and 5.0 kHz. The maximum deviation was recorded at each test condition.

### 5.2.4 Test setup

### 5.2.5 Measurement Result

- Modulation Limit

#### 462 MHz Interstitial (CH4 : 462.637 5 MHz)

| Audio input Level (dB) | Frequency Deviation (kHz) |         |            | Limit (kHz) |
|------------------------|---------------------------|---------|------------|-------------|
|                        | @ 300 Hz                  | @ 1 kHz | @ 3kHz     |             |
| -20                    | 0.16                      | 0.46    | 1.02       | 2.5         |
| -15                    | 0.24                      | 0.77    | 1.74       | 2.5         |

## 5.3 Occupied Bandwidth

### 5.3.1 Standard Applicable [FCC Part 95.573, Part 2.1049]

The Emission bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits.

#### **FCC Part 95.573**

Each FRS transmitter type must be designed such that the occupied bandwidth does not exceed 12.5 kHz.

### 5.3.2 Test Environment conditions

- Ambient temperature : (21 ~ 22) °C
- Relative Humidity : (48 ~ 52) % R.H.

### 5.3.3 Measurement Procedure

1. The EUT was modulated by 2.5 kHz Sine wave audio signal, The level of the audio signal employed is 16 dB greater than that necessary to produce 50% of rated system deviation.
2. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.
3. Measure the maximum width of the emission that is 26 dB down from the peak of the emission. The 99% occupied bandwidth is the frequency bandwidth of the signal power at the 99% channel power of occupied bandwidth.

The spectrum analyzer is set to the as follows :

- RBW : 300 Hz
- VBW : >3 x RBW
- Detector function : peak
- Trace : max hold

### 5.3.4 Test setup

### 5.3.5 Measurement Result

| Channel Description  | CH | Frequency [MHz] | 99 % Bandwidth [kHz] | 26 dB Bandwidth [kHz] | Limit [kHz] | Test Results |
|----------------------|----|-----------------|----------------------|-----------------------|-------------|--------------|
| 462 MHz Interstitial | 4  | 462.637 5       | 9.96                 | 10.52                 | 12.5        | Compliance   |
| 467 MHz Interstitial | 11 | 467.637 5       | 9.96                 | 10.53                 | 12.5        | Compliance   |

## 5.4 Emission Mask

### 5.4.1 Standard Applicable [FCC Part 95.579]

#### **FCC Part 95.579**

Each FRS transmitter type must be designed to satisfy the applicable unwanted emissions limits in this paragraph.

(a) Attenuation requirements. The power of unwanted emissions must be attenuated below the carrier power output in Watts (P) by at least:

- (1) 25 dB (decibels) in the frequency band 6.25 kHz to 12.5 kHz removed from the channel center frequency.
- (2) 35 dB in the frequency band 12.5 kHz to 31.25 kHz removed from the channel center frequency.
- (3)  $43 + 10 \log (P)$  dB in any frequency band removed from the channel center frequency by more than 31.25 kHz.

### 5.4.2 Test Environment conditions

- Ambient temperature : (21 ~ 22) °C
- Relative Humidity : (48 ~ 52) % R.H.

### 5.4.3 Measurement Procedure

The EUT was modulated by 2.5 kHz Sine wave audio signal; the level of the audio signal employed is 16 dB greater than that necessary to produce 50 % of rated system deviation. Rated system deviation is 2.5 kHz.

The spectrum analyzer is set to the as follows

- RBW = 300 Hz
- VBW: >3xRBW

### 5.4.4 Test setup

|--------------|------------|

## 5.5 Transmitter Radiated Unwanted Emissions

### 5.5.1 Standard Applicable [FCC Part 95.579]

According to FCC section 95.579, the unwanted emission should be attenuated below Transmitter output power(P) by at least  $43+10 \log(P)$  dB.

### 5.5.2 Test Environment conditions

- Ambient temperature : (21 ~ 22) °C
- Relative Humidity : (48 ~ 52) % R.H.

### 5.5.3 Measurement Procedure

Refer 5.1.3

### 5.5.4 Test Setup

Refer 5.1.4

### 5.5.5 Measurement Result

The following frequencies were selected based on the output power results.

| Channel Description  | CH | Freq. [MHz] | ERP power |       |
|----------------------|----|-------------|-----------|-------|
|                      |    |             | [dBm]     | [W]   |
| 462 MHz Interstitial | 4  | 462.637 5   | 25.34     | 0.342 |

| Emission Frequency [MHz] | Ant Pol | Level below Carrier [dBc] | Margin [dB] | Limit [dBc] | Test Results |
|--------------------------|---------|---------------------------|-------------|-------------|--------------|
| 925.275 0                | V       | 61.26                     | 22.92       | 38.34       | Compliance   |
| 1 387.912 5              | H       | 53.13                     | 14.79       | 38.34       | Compliance   |
| 1 850.550 0              | H       | 50.87                     | 12.53       | 38.34       | Compliance   |
| 2 313.187 5              | H       | 53.87                     | 15.53       | 38.34       | Compliance   |
| 2 775.825 0              | H       | 50.71                     | 12.37       | 38.34       | Compliance   |
| 3 238.462 5              | V       | 45.44                     | 7.10        | 38.34       | Compliance   |

**Note:** The formula for limit is below;  
 $43+10 \log (P)$  where, P = EUT's output power in W  
 Therefore  $43+10\log(0.342) = 38.34$

| Channel Description  | CH | Freq. [MHz] | ERP power |       |
|----------------------|----|-------------|-----------|-------|
|                      |    |             | [dBm]     | [W]   |
| 467 MHz Interstitial | 11 | 467.637 5   | 24.86     | 0.306 |

| Emission Frequency [MHz] | Ant Pol | Level below Carrier [dBc] | Margin [dB] | Limit [dBc] | Test Results |
|--------------------------|---------|---------------------------|-------------|-------------|--------------|
| 935.275 0                | H       | 58.65                     | 20.79       | 37.86       | Compliance   |
| 1 402.912 5              | H       | 54.22                     | 16.36       | 37.86       | Compliance   |
| 1 870.550 0              | H       | 51.41                     | 13.55       | 37.86       | Compliance   |
| 2 338.187 5              | H       | 54.35                     | 16.49       | 37.86       | Compliance   |
| 2 805.825 0              | H       | 45.54                     | 7.68        | 37.86       | Compliance   |
| 3 273.462 5              | V       | 42.14                     | 4.28        | 37.86       | Compliance   |

**Note:** The formula for limit is below;  
 $43+10 \log (P)$  where, P = EUT's output power in W  
 Therefore  $43+10\log(0.306) = 37.86$

| Channel Description | CH | Freq. [MHz] | ERP power |       |
|---------------------|----|-------------|-----------|-------|
|                     |    |             | [dBm]     | [W]   |
| 462 MHz New         | 19 | 462.650 0   | 24.88     | 0.307 |

| Emission Frequency [MHz] | Ant Pol | Level below Carrier [dBc] | Margin [dB] | Limit [dBc] | Test Results |
|--------------------------|---------|---------------------------|-------------|-------------|--------------|
| 925.300 0                | V       | 59.06                     | 21.18       | 37.87       | Compliance   |
| 1 387.950 0              | H       | 53.53                     | 15.65       | 37.87       | Compliance   |
| 1 850.600 0              | H       | 47.78                     | 9.90        | 37.87       | Compliance   |
| 2 313.250 0              | H       | 52.45                     | 14.57       | 37.87       | Compliance   |
| 2 775.900 0              | H       | 51.11                     | 13.23       | 37.87       | Compliance   |
| 3 238.550 0              | V       | 46.55                     | 8.67        | 37.87       | Compliance   |

**Note:** The formula for limit is below;  
 $43+10 \log (P)$  where, P = EUT's output power in W  
 Therefore  $43+10\log(0.307) = 37.87$

## 5.6 Frequency Stability

### 5.6.1 Standard Applicable [FCC Part 95.565, Part 2.1055]

#### FCC Part 95.565

Each FRS transmitter type must be designed such that the carrier frequencies remain within  $\pm 2.5$  parts-per-million of the channel center frequencies specified in § 95.563 during normal operating conditions.

### 5.6.2 Test Environment conditions

- Ambient temperature : (21 ~ 22) °C
- Relative Humidity : (48 ~ 52) % R.H.

### 5.6.3 Measurement Procedure

EUT connect to Spectrum analyzer, test is performed in T&H chamber.

These measurements shall also be performed at normal and extreme test conditions.

- Test Method : ANSI/TIA-603-E-2016, clause 3.2.2 for frequency stability tests
  - Frequency stability with respect to ambient temperature
  - Frequency stability when varying supply voltage

### 5.6.4 Test setup

### 5.6.5 Measurement Result

#### 462 MHz Interstitial (CH4 : 462.637 5 MHz)

| Temp(°C)        | Power Supply   | Measured Freq(MHz) | Freq Drift(ppm) |
|-----------------|----------------|--------------------|-----------------|

## 5.7 AC Power Conducted emissions

### 5.7.1 Standard Applicable [ FCC §15.207(a)]

For intentional radiator that is designed to be connected to the public utility(AC)power line, the radio frequency. Voltage that is conducted back onto the AC power line on any frequencies hopping mode within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50  $\mu$ H/50 ohms line Impedance stabilization network(LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges.

§15.207 limits for AC line conducted emissions;

| Frequency of Emission(MHz) | Conducted Limit (dB $\mu$ V) |            |
|----------------------------|------------------------------|------------|
|                            | Quasi-peak                   | Average    |
| 0.15 ~ 0.5                 | 66 to 56 *                   | 56 to 46 * |
| 0.5 ~ 5                    | 56                           | 46         |
| 5 ~ 30                     | 60                           | 50         |

\* Decreases with the logarithm of the frequency

### 5.7.2 Test Environment conditions

• Ambient temperature : (21 ~ 22) °C • Relative Humidity : (49 ~ 51) % R.H.

### 5.7.3 Measurement Procedure

EUT was placed on a non- metallic table height of 0.8 m above the reference ground plane. Cables connected to EUT were fixed to cause maximum emission. Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the Maximum signal strength.

### 5.7.4 Used equipment

| Equipment     | Model No. | Serial No. | Manufacturer    | Next cal date | Cal interval | Used                                |
|---------------|-----------|------------|-----------------|---------------|--------------|-------------------------------------|
| Test receiver | ESCS30    | 100111     | Rohde & Schwarz | 2020. 01. 22  | 1 year       | <input checked="" type="checkbox"/> |
