

Maximum Permissible Exposure (MPE) Evaluation Report

Report No.	: EME-060268
Model No.	: WCP5102
Issued Date	: Mar. 15, 2006

- Applicant : AboCom Systems, Inc. 1F, No. 21, Yanfa 2nd Road, SBIP, Hsinchu City 300, Taiwan
- Test By : Intertek Testing Services Taiwan Ltd. No. 11, Lane 275, Ko-Nan 1 Street, Chia-Tung Li, Shiang-Shan District, Hsinchu City, Taiwan

This test report consists of 5 pages in total. It may be duplicated completely for legal use with the allowance of the applicant. It shall not be reproduced except in full, without the written approval of Intertek Laboratory. The test result(s) in this report only applies to the tested sample(s).

Summary of Tests

802.11b/g MIMO Wireless LAN PCI Card -Model: WCP5102 FCC ID: MQ4-WCP5102

Test	Reference	Results	
Minimum 6dB Bandwidth test	15.247(a)(2)	Complies	
Maximum Output Power test	15.247(b)	Complies	
Radiated Spurious Emission test	15.205, 15.209	Complies	
Power Spectrum Density test	15.247(e)	Complies	
Emission on the Band Edge test	15.247(d)	Complies	
AC Power Line Conducted Emission test	15.207	Complies	

FCC ID. : MQ4WCP5102

1. Introduction

The EUT operates in the 2.4GHz ISM band. Due to the EUT (include antenna) at its normal operation distance is at least 20 cm from the human body, the EUT was defined as a Mobile Device.

The reason to do the MPE Evaluation is to avoid the RF hazard to human body. The maximum output power and gain of the antenna were used to calculate the limited Power density (S) at 20cm distance away from the product. The limit for Maximum Permissible Exposure (MPE) specified in FCC 1.1310 is followed.

2. RF Exposure Limit

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in 1.1307(b).

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm ²)	Average Time (minutes)	
(A) Limits for Occupational / Control Exposures					
30-300	61.4	0.163	1.0	6	
300-1500	-	-	F/300	6	
1500-100,000	-	-	5	6	
(B) Limits for General Population / Uncontrolled Exposure					
30-300	27.5	0.073	0.2	30	
300-1500	-	-	F/1500	30	
1500-100,000	-	-	1.0	30	

Limits for Maximum Permissible Exposure (MPE)

F= Frequency in MHz

3. RF Exposure calculations

From FCC 1.1310 table 1, the maximum permissible RF exposure for an uncontrolled environment is $1mW/(cm^2)$ Power density (S) is calculated by the following formula:

 $\mathbf{S} = (\mathbf{P} * \mathbf{G})/4\pi \mathbf{R}^2$

where, $S = Power density (mW/cm^2)$

- P = Output power to antenna (mW)
- R = Distance between radiating structure and observation point (cm)

G = Gain of antenna in numeric

 $\pi = 3.1416$

Example:

Assume a mobile device operates at 2412MHz and its maximum output power is 50mW, and the maximum gain of antenna is 1 (numeric) /0dBi.

then the power density (S) = $(50 * 1)/4*\pi*20^2 = 0.00995 \text{ (mW/cm}^2)$

4. Test results

Test Mode: 802.11b (DSSS Modulation) operating mode

	Channel	Maximum	Output power	Power density	Limit of
Channel	Frequency	antenna gain	to antenna		power density
	(MHz)	(numeric)	(mW)	(mW/cm^2)	(mW/cm^2)
1	2412	1.58	80.91	0.02551	1.0
6	2437	1.58	89.95	0.02836	1.0
11	2462	1.58	80.35	0.02533	1.0

Test Mode: 802.11g (OFDM Modulation) operating mode

	Channel	Maximum	Output power	Power density	Limit of
Channel	Frequency	antenna gain	to antenna		power density
	(MHz)	(numeric)	(mW)	(mW/cm^2)	(mW/cm^2)
1	2412	1.58	343.56	0.10833	1.0
6	2437	1.58	386.37	0.12182	1.0
11	2462	1.58	360.58	0.11369	1.0

The Notice in Installation Manual has been stated as below:

While installing and operating this transmitter, the radio frequency exposure limit of $1 \text{mW}/(\text{cm}^*\text{cm})$ may be exceeded at distances close to the transmitter. therefore, the user must maintain a minimum distance of 20 cm from the device at all time.
