

The 802.11g Wireless 32bit CardBus PC Card is a device that lets you connect your notebook to a wireless local area network (LAN) is like a regular LAN, except that you can share information without looking for a place to plug in, and augment networks without installing or moving wires. Based on radio frequency (RF) technology, a wireless LAN transmits and receives data over the air, along with the guarantee to provide privacy and noninterference by the use of separate radio frequency.
