

Dear Sir:

Our wireless product, model no.: WR5024, FCC ID: MQ4WR5204 is base on country's requirement of customer to setup wireless channel. For different country, we have different country code to setup. The country code is fixed and user can't change it. For example, the user in American can only use 2400 ~ 2483.5MHz (channel 1 to 11).

Best regards.

A handwritten signature in cursive script, appearing to read "Earney Wei", followed by the date "4/11/09" written in a similar style.
